HEALTH LAW, POLICY, AND BIOETHICS

Health law is a broad and exciting field that is not easily defined. There are, at least, three different, but overlapping, components to health law. First, the field is concerned with the provision of health care within the American health care system—the delivery, financing, and organization of personal medical services. Health care services consume a substantial part of the nation’s Gross National Product. The study of the health care system involves complex judgments about how to allocate health care services: access, equity, justice, quality, and cost. The United States has a highly eclectic health care system involving both private health care (e.g., managed care and fee-for-service) and public health care financing (e.g., Medicare and Medicaid).

Second, the field is concerned with bioethics—the ethically and legally appropriate way to structure myriad relationships among health care professionals and patients. Bioethics is concerned with micro-relationships between professionals and patients and concerns itself with enduring issues such as informed consent, confidentiality, and physician fidelity. Bioethics is also concerned with many interesting, emerging issues at the interface of law and society such as the human genome project.

Third, the field is concerned with public health. Public health law is concerned with the powers and duties of the state to assure the conditions for populations to be healthy. As a result, public health law is concerned with constitutional powers such as the police power and issues of federalism. Public health discusses many topics that are important to assuring healthy populations including tobacco, infectious diseases, and firearms.

The study of health law, policy and ethics, therefore, involves many subjects in a general legal education such as constitutional law, administrative law, local and government law. Scholars in health law also are also interested in specialized legal topics such as disability discrimination law and international law (notably human rights).

Georgetown has the most well regarded faculty and resources devoted to health law of any elite law school in the United States. Founded in 2007, the Linda and Timothy O’Neill Institute for Global and National Health Law aims to find innovative solutions for the most pressing health concerns facing the nation and the world through research, scholarship, and reflective engagement with partners in the public and private sectors. In addition to our own faculty, students can benefit from rich resources on our main campus: the Kennedy Institute of Ethics, the Program in Clinical Ethics, and the Institute for Health Care Research and Policy. Additionally, the joint degree program in law and public health with Johns Hopkins University is widely regarded as the best such program. The two Universities offer a combined J.D. and MPH. All in all, there is a world of opportunities for students interested in the related fields of health law, policy and ethics at Georgetown.

The Law Center has a vast array of courses in the fields of health law, policy and ethics. We have separated our offerings much as described above: health care financing, organization and delivery; bioethics; and public health. The upper class students will want to take the core classes in each of the respective areas of health law: Health Law and Policy and Public Health Law and Ethics.

Search Health Law Policy and Bioethics Courses (http://curriculum.law.georgetown.edu/course-search/?cluster=cluster_60)

LAW 534 v01 Access to Health Care and Coverage: Law and Policy (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20534%20v01)
J.D. Course (cross-listed) | 3 credit hours
The law governing access to health care has been in flux and in legal dispute in recent years. This course will examine America’s programs for health care access and finance, including employment-based private insurance, Medicare, Medicaid, CHIP, and VA. The course will also examine the enactment, implementation, and litigation of the Affordable Care Act. In addition to these payment systems, the course will also at laws affecting non-comprehensive systems such as emergency rooms, public hospitals, and community health centers. No previous knowledge of health law is required.

Note: The course will not focus on biomedical ethics, medical malpractice, or pharmaceutical regulation.
This is a required course for the U.S. Health Law Certificate.

LAW 3091 v00 Addiction and Mental Health Law and Policy (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203091%20v00)
LL.M Seminar (cross-listed) | 2 credit hours
Addiction and mental health have increasingly become an integral part of the broader policy landscape. This shift has been accelerated by the impact of social issues such as the overdose epidemic, suicide and homelessness. This seminar will explore the framework of laws and policies promoting human rights, dignity, and recovery for people with substance use disorders and mental health conditions. It will highlight systemic and community responses to addiction, mental health, and related social issues as well as the use of litigation, legislation, advocacy and financial incentives as tools for reform.

Discussion will include:

• Evolution of responses to addiction, mental health, and related social issues;
• Human rights, deinstitutionalization and the rights of an individual to receive services in the most integrated setting appropriate to their needs;
• Statutory and regulatory frameworks promoting access to treatment, including the Patient Protection and Affordable Care Act;
• Understanding data, outcome measures, and healthcare finance structures for behavioral health, including Medicaid and commercial insurance;
• The role of litigation to promote accountability and protect civil rights;
• The impact of stigma, the dignity of risk, and harm reduction philosophy;
• Role of the health care and criminal justice systems and trends in reforms;
• The impact of globalization and comparative analysis of international drug policy;
• Cultural competence in legal advocacy and practice.

Guest lectures and discussion will provide real world case studies on laws and policy reforms impacting addiction and mental health.
LAW 1602 v00 Advanced Topics in Torts: Products Liability, Guns, and Drugs (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201602%20v00)
J.D. Course (cross-listed) | 3 credit hours
This upper level course will cover the law of products liability generally and take a close look at the state of products liability litigation and liability in relation to guns and to opioids. The goal is to combine a survey of the complicated field of products liability law with a sophisticated deep dive into two areas of cutting edge products liability litigation. The first part of the course will familiarize students with major topics applicable to all products manufacturers including: a product distributor’s liability for defect-caused harm, allocating responsibility inside and outside the commercial chain of distribution, causation, affirmative defenses, approaches to design defect litigation, and federal preemption of products liability claims. Later in the course, we will examine gun manufacturer liability, currently and prior to the passage of the Protection of Lawful Commerce in Arms Act, which reshaped the landscape of gun litigation. Finally, we will end with a consideration of the growing litigation related to the opioids, litigation inflected by doctrines peculiar to prescription drug manufacturer liability. The final examination will be a self-scheduled 48 hour take home exam. Attendance and participation are crucial to the course, and significant credit will be given to those students who contribute thoughtfully and constructively to class discussion of cases and issues.

LAW 277 v02 Aging and Law Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20277%20v02)
J.D. Seminar (cross-listed) | 2 credit hours
This seminar explores, through lecture, discussion, role playing, and problem solving, the range of legal challenges and public policy issues affecting older adults. Subject areas include health care benefits (Medicare, Medicaid); long-term services and supports (nursing homes, home and community-based services, long-term care insurance, state-based programs); income security programs (Social Security, SSI); aging and autonomy, including elder abuse, neglect and exploitation and advance planning related to incapacity (powers of attorney, guardianship and its alternatives, choices regarding life-sustaining medical treatment); housing and consumer issues affecting older adults; and ethical issues in representing older adults. Coursework will address systemic inequities faced by older adults of color, older women, LGBTQ older adults, older adults with disabilities, and older adults who are immigrants or have limited English proficiency. The seminar is both practice- and policy-oriented and integrative with respect to other coursework and related disciplines.

Recommended: Prior or concurrent enrollment in one or more of the following courses: Administrative Law; Family Law I: Marriage and Divorce; Constitutional Law II: Individual Rights and Liberties; Professional Responsibility.

LAW 065 v02 Alternative, Complementary, and Integrative Medicine, The Legal Issues Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20065%20v02)
J.D. Seminar (cross-listed) | 3 credit hours
Alternative, Complementary, and Integrative Medicine ("non-traditional medicine") ("CAM") is the fastest-growing sector of American Health Care and is one of the fastest growing fields in the United States. Presently, at least 50 percent of Americans are using some form of alternative and complementary therapy such as acupuncture, nutritional supplementation, herbs, massage, yoga, chiropractic or homeopathy. According to the Journal of the American Medical Association in 1997, visits to alternative health care practitioners exceeded total visits to all conventional primary care physicians. The number of clinics and hospitals that integrate some modalities of CAM alongside conventional medicine is growing rapidly. The Institute of Medicine, a part of the National Academy of Sciences, has held recent conferences on the values of both CAM and Integrative Medicine. The NIH is using significant resources to fund research in this area.

This development, of course, is raising legal issues. There is a growing but still unsettled body of law on this subject. Some but not all CAM modalities are now licensed and regulated by at least some states. Federal regulatory bodies, such as the FDA and FTC are trying, within the limits of their statutory authority, to protect what they perceive to be the interests of the public. Yet, they come at the problem through conventional, rather than alternative, eyes. Conventional law is based upon protecting the public from purveyors of the proverbial “snake oil” frauds. And to an extent this law is being used to keep out alternatives to the established health-care modalities. This seminar studies the tensions, legal, economic, and social, of this struggle as it unfolds. This seminar covers several areas of law including administrative law, medical malpractice, informed consent, FDA/FTC law, licensure, among others. This seminar discusses the balancing of paternalism vs. individual rights. A paper meeting the upperclass legal writing requirement is required.
LAW 1107 v00 Analytical Methods (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 201107%20v00)
J.D. Course (cross-listed) | 3 credit hours
Lawyers in every type of practice (corporate, litigation, government, public interest, etc.) routinely deal with problems that require a basic understanding of concepts and methods from economics and statistics. This course provides an introduction to these subjects and their application and relevance to law and legal practice. Topics covered include decision analysis, game theory, probability, and statistics. Grades will be based on a graded problem set and a take-home final examination. No prior background in economics or statistics is required; however, we will regularly use elementary algebra and geometry. Students with strong backgrounds in economics, mathematics, or statistics should consult with the professor before enrolling in the course.

Course Objective and Learning Outcomes: The objective of the course is to enhance students’ ability to give sound legal advice and make effective legal arguments by introducing them to selected concepts and methods from economics and statistics that are relevant to numerous areas of law and legal practice. These concepts and methods include: decision trees, expected value, sensitivity analysis, risk aversion, present value; Nash equilibrium, game trees, backward induction, subgame perfection, moral hazard, adverse selection; probability, conditional probability, independence, Bayes’ rule; descriptive statistics (including measures of central tendency and variability), hypothesis testing, confidence intervals, statistical significance, type I and type II errors, and regression analysis.

By the end of the course, I expect students to have a good understanding of these concepts and methods and to be able demonstrate a basic proficiency in applying them to: (i) unpack complex decisions of the kind that lawyers and their clients often encounter in litigation and transactions; (ii) analyze situations involving strategic interactions (i.e., situations where the outcome depends on the strategies and actions of multiple parties) of the kind that lawyers and their clients often encounter in litigation and transactions; and (iii) engage in probabilistic and statistical reasoning and evaluate probabilistic and statistical evidence of the kind that courts and lawyers often encounter in litigation.

LAW 2028 v01 Assisted Reproductive Technologies and the Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 202028%20v01)
LL.M Seminar (cross-listed) | 2-3 credit hours
This 2 or 3 credit seminar will provide an overview of the underlying and competing laws and policies arising from the assisted reproductive technologies (ARTs) that continually make front page news. Since the 1980 opening of the country’s 1st IVF clinic amidst protests and pickets, courts and legislatures have struggled to create laws and policies in response to continually evolving reproductive advances. Topics will include: the legal status of the IVF embryo in the context of procreative rights; embryo cryopreservation, storage, disposition and mix-ups; legal implications of advances in egg freezing, reproductive genetics and oncofertility; posthumous reproduction; egg and sperm donation; traditional/genetic and gestational surrogacy; unique issues for single and same-sex couples, including the rapidly changing impact of same-sex marriage; and professional standards, economic and regulatory aspects of the ARTs.

New this semester will be the inclusion of two classes that will examine selected legal and policy aspects of comparative ART law perspectives on “third-party ART” and the impact these differences have on cross-border reproductive practices, with a particular focus on surrogacy.

National experts in their respective fields will provide guest lectures on: medical advances in ART (including a field trip to a locally based national IVF clinic); psychosocial aspects of donor egg and 3rd party ART; reproductive genetics; and regulation and public relations for ART providers.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement for JD students. The paper requirements of the 2 credit section will not fulfill the Upperclass Legal Writing Requirement for JD students.
LAW 1536 v00 Bioethics and Social Justice (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201536%20v00)
J.D. Seminar (cross-listed) | 2 credit hours
This seminar explores legal, ethical, and social issues raised by developments in health, medicine, and the biological sciences at the U.S. and global levels. It first provides an overview of the normative theories that inform the development of the field of bioethics, as well as connects these theories to legal and social dynamics that continue to shape discussions of equity and justice. It then considers a spectrum of priority topics and themes, through both a theoretical and practical lens, such as end-of-life issues, reproductive rights, human subjects research, access to medicines, and vaccines. Students will develop an in-depth perspective on how law and ethics overlap and shape the discourse on these priority topics. This seminar will be especially informative for students looking to obtain a practical view into how the law interacts with ethical dilemmas in health, medicine, and science.

Learning Objectives:
• Describe the normative theories that inform the development of the field of bioethics and the role that the law has played in this evolution
• Describe practical examples of legal and ethical dilemmas that arise across multi-disciplinary topics in health, medicine, and the biological sciences
• Articulate the ethical arguments on often opposing sides of priority bioethical issues, understanding the varied levels of nuance involved
• Analyze the role of legal institutions and law and in creating a framework to address the ethical, legal, and social issues that arise in the fields of health, medicine, and the biological sciences

LAW 1536 v01 Bioethics and Social Justice (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201536%20v01)
J.D. Seminar (cross-listed) | 1 credit hour
This seminar explores legal, ethical, and social issues raised by developments in health, medicine, and the biological sciences at the U.S. and global levels. It first provides an overview of the normative theories that inform the development of the field of bioethics, as well as connects these theories to legal and social dynamics that continue to shape discussions of equity and justice, including on the global stage. It then uses several in-class simulations to explore the practical challenges—both legal and ethical—that arise for counsel practicing in this field. The simulations are designed for students to “step into the shoes,” as it were, of different actors, from in-house counsel at an academic medical center to the United States Ambassador to the United Nations, to gain practical insight into real-world situations. This seminar will be especially informative for students looking to obtain a practical view into how the law interacts with ethical dilemmas in health, medicine, science, and politics.

Learning Objectives:
• Describe the normative theories that inform the development of the field of bioethics and the role that the law has played in this evolution
• Describe practical examples of legal and ethical dilemmas that arise across multi-disciplinary topics in health, medicine, and the biological sciences
• Articulate the ethical arguments on often opposing sides of priority bioethical issues, understanding the varied levels of nuance involved
• Analyze the role of legal institutions and law and in creating a framework to address the ethical, legal, and social issues that arise in the fields of health, medicine, and the biological sciences

Note: Withdrawals are permitted up until the last class for this specific course.
LAW 3038 v00 Biosecurity and the Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203038%20v00)
LL.M Seminar (cross-listed) | 2 credit hours
This course is designed to provide students an understanding of current and emerging issues concerning biosecurity and relevant law. Recent global acts of terrorism coupled with sophisticated advances in biotechnology present a host of complex issues driving biosecurity analysis and discussion. We will examine both the history and current state of bioterrorism threats with an emphasis on the legal and ethical challenges as we "sort out" best methods for moving forward. Our analysis will explore the recent Zika and Ebola threats as well as the threats posed by prior H1N1, SARS, anthrax, smallpox, SARIN, Ricin, and even the possibilities stemming from genetically engineered once thought "dead" bio-threats. Our method of instruction will focus on significant legal challenges each week. We will however, use past examples of quarantine and cordon sanitaire applications to instruct as how best to legally address possible pandemics. Within our course exercises, students will be assigned healthcare and legal roles in order to gain insight as to management of a true healthcare crisis. Guest speakers with knowledge of crisis management will be invited to share personal experiences and advice concerning future pandemics. We will also examine recent legislation, both domestic and international, with a view toward a better understanding of the complex challenges within biosecurity.

Note: NOTE: In the Fall 2021 semester, this course will take place online via Zoom (https://www.law.georgetown.edu/wp-content/uploads/2021/08/Online_Class_21_Students.pdf).

LAW 1789 v00 Biotechnology and the Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201789%20v00)
J.D. Seminar (cross-listed) | 3 credit hours
This is a survey class, examining issues ranging from drug regulation, clinical trials, assisted reproductive technology, telemedicine, and stem cell development/regulation to the commercialization of the human body. For this class we will use the Biotechnology, Bioethics, & The Law Casebook (Goodwin, et. al., eds). This course requires substantial reading, preparation, organization, and the ability to analyze subtle nuances between various judicial decisions, legislative enactments, ethics, and legal rules, which sometimes may seem in conflict.

In this class, we will examine whether emerging biotechnological conflicts are best resolved by regulation, judicial intervention, or private negotiation. Professor Goodwin encourages robust dialogue. As such, students should come to class prepared with their ideas, intuitions, and opinions. Their analysis should demonstrate a grasp of the materials. Students are expected to discuss the materials, act responsibly toward their peers, as well as conduct themselves in a professional manner. There are no prerequisites for this course. However, students must be prepared for rigorous discussions and substantial reading assignments. This course is a building block for the other courses in ethics, health law, and a law and science curriculum, including Patents, Food & Drug Law, Health Regulations, and Bioethics. The core competencies expected in this class are critical thinking and the application of social, legal, moral, and economic reasoning.

Much of the reading assigned for class will be covered during discussion. However, some assigned readings may not be covered given limited class time. Nonetheless, students are responsible for all reading materials. The readings include excerpts from medical journals, regulations, cases, newspapers, and social science periodicals.

Course Goals

The goals of this course are to:

- Introduce students to the study of biotechnological developments, health policy, and ethics;
- Familiarize students with the medical and legal literature on the topic;
- Engage students with practical as well as theoretical ideas in biotechnology law;
- Stimulate intellectual curiosity about the subject matter;
- And inspire critical thinking and thoughtful analysis.

LAW 131 v02 Disability Discrimination Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20131%20v02)
J.D. Course | 3 credit hours
This course covers the Americans with Disabilities Act, its amendments, regulations, and interpretive guidance as they relate to discrimination against people with disabilities in employment, the programs, services, or activities provided by government entities, and public accommodations. The course will take a pragmatic approach to exploring the rights and responsibilities arising from this law and will focus on such issues as defining disability, the concept of qualified persons with a disability, reasonable accommodations, medical exams and disability-related inquiries, program access, and public accommodations.
This course focuses on the tax and ERISA aspects of employer-sponsored health and welfare benefit plans. The tax discussion will concentrate on the conditions for favorable tax treatment of health and welfare benefits (and other statutory fringe benefits), the cafeteria plan rules, the applicable nondiscrimination requirements, and the special rules applicable to funded welfare benefits. The ERISA discussion will focus on plan design, reporting and disclosure, claims procedures, and fiduciary duty rules. The course will integrate the tax, labor and public policy aspects of the Affordable Care Act and other health care reforms.

**Prerequisite:** Federal Income Taxation (formerly Taxation I).

**Mutually Excluded Courses:** Students may not receive credit for this course and Health and Welfare Benefit Plans: Tax & ERISA Aspects.

**Note:** This course is part of the following graduate programs: Health Law
LL.M. Taxation LL.M.

This course is required for the Employee Benefits Certificate. Students may not withdraw from this class after the add/drop period ends without the permission of the professor.

**LAW 263 v02 Employment Law**
J.D. Course | 3 credit hours
This course surveys the law regulating the fundamentals of the employee-employer relationship and examines a variety of public policy questions relating to employment standards regulation. The subjects covered may include: the common law doctrine of at-will employment and the development of contract and tort exceptions to that doctrine; statutory efforts to protect employees from wrongful discharge; the law of work-related invasions of privacy (e.g., drug-testing, genetic screening, polygraphs, etc.); the National Labor Relations Act; the regulation of employment compensation (e.g., Fair Labor Standards Act, prevailing wage laws); the regulation of workplace health and safety (e.g., Occupational Safety and Health Act). This course may also cover the Worker Adjustment and Retraining Notification Act, the Family Medical Leave Act, and workers compensation.

**LAW 146 v08 Environmental Law**
J.D. Course (cross-listed) | 3 credit hours
This course focuses on legal strategies to regulate and remedy environmental harms. The course is designed to prepare transactional lawyers, regulatory lawyers, government counsel and litigators, as well as students interested in specializing in environmental law. A major goal of the course is to introduce students to the analytical skills necessary to understand and work in this and other predominantly statutory and regulatory fields. The course starts by reviewing economic, ecological and historical perspectives on protection of the environment. We also briefly cover common law environmental claims. We then turn to several cross-cutting public environmental law issues, namely discussion of regulatory design choices, federalism issues, a brief introduction to important administrative law concepts, cases, and doctrine, and analysis of the role of citizens as enforcers under US environmental laws. We then turn to in-depth analysis of key portions of several of the most significant federal environmental laws, including hazardous waste cleanup laws, the National Environmental Policy Act (NEPA), the Endangered Species Act, the Clean Air Act, and the Clean Water Act. We will also look at the developing body of law regarding climate change.

**LAW 146 v10 Environmental Law**
J.D. Course (cross-listed) | 3 credit hours
Between New Year’s Day in 1970 and December of 1980, Congress enacted virtually all of our major federal environmental statutes. To this day, these laws form the core of this country’s approach to addressing environmental problems. All of the laws aim to achieve cleaner water, air, and land, while at the same time taking very different approaches to doing so. This course will introduce you to the major federal statutes on environmental protection, including but not limited to the Clean Air Act, the Clean Water Act, and the Superfund law. You will come to understand the basic regulatory goals and mechanisms of these laws. You will also learn how one might choose among these goals and mechanisms in fashioning environmental policy. Ideally, you will come away with an informed judgment about how far we have come in protecting the environment and how far we still have to go.

**Recommended:** Administrative Law or a first-year elective on legislation and/or regulation.
This class will provide students with a basic toolset in public health's empirical methods. Disciplines such as epidemiology, risk assessment, and biostatistics provide ways to systematically evaluate proposed policy and search for answers in the quest for better health. To illustrate how these methods are deployed in practice, we will discuss case studies from the Ebola epidemic in West Africa, Zika virus, Middle East Respiratory Syndrome (MERS), and novel avian influenza, among others. We will also examine US domestic health issues that engage questions of law, policy, and democracy.

Students who successfully complete this class will not be trained to be professional scientists. However, students will be able to:

1. Understand fundamental epidemiological concepts;
2. Interpret health data and research;
3. Critically evaluate empirical claims;
4. Identify when assistance from health experts is required; and
5. Apply learnings to the development of policy and laws.

Lawyers with training in epidemiology will be able to more effectively respond to emerging and persistent issues in our complex society, whether they practice in health law, torts, environmental regulation, law enforcement, or human rights.

Note: In the Spring 2022 semester, this course will take place online via Zoom (https://georgetown.box.com/s/s4nyf5n3g92usmagij9guq5n2cjow7f).

Not intended for MPH students. No prior knowledge of Epidemiology is assumed. WEEK ONE COURSE. This course will meet for one week only on the following days: Monday, January 10, 2022 through Thursday, January 13, 2022, 1:30 p.m. - 4:50 p.m. This course is mandatory pass/fail and will not count toward the 7 credit pass/fail limit for J.D. students. ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal. Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.
LAW 1272 v00 Gender and Sexuality (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201272%20v00)
J.D. Course (cross-listed) | 3 credit hours

This course will provide an introduction to the legal contexts and theoretical debates surrounding sex, gender, sexuality, and their intersections. We will explore the way gender and sexuality have been debated, defined, and redefined in the contexts of gender identity and performance, sexual pleasure, reproductive rights, sexual violence, marriage, family organization, work, and education. In these contexts we will consider the evolution of the law, the discursive effects of law, and the ways feminist and queer theorists have challenged and reimagined prevailing legal rules and cultural norms. In short, the class will probe the ways that law is gendered, sexualized, and raced, and with what overall effects on social institutions and practices.

Key topics will include:
- The Mutual Influence of Identitarian Politics and Law
- Constitutional Law of Sex Equality, Liberty, and Religious Objection
- Regulation of Sexual Conduct
- Regulation of Reproduction
- The Evolving Meanings of Marriage & Family
- Sexual Harm & Consent
- Gender & Sexuality at Work, School and other Institutions

Strongly Recommended: Constitutional Law II.

Mutually Excluded Courses: Students may not receive credit for this course and Sexual Orientation and the Law: Selected Topics in Civil Rights.

LAW 493 v01 Global Health Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20493%20v01)
LL.M Seminar (cross-listed) | 2 credit hours

Global Health Law is the flagship course for Georgetown University Law Center’s O’Neill Institute for National and Global Health Law. This course is open to both Georgetown JD and LLM students and is a compulsory unit in the National and Global Health LLM and the Global Health Law and Governance LLM.

No longer an emerging field, global health law encompasses international law and policy that directly or indirectly affects global health, including treaties, regulations, global strategies and other non-binding standards, and national and international jurisprudence. The field of study includes both legal instruments designed to protect public health as well as the interaction between legal instruments from other international legal regimes and public health considerations and concerns. This course provides a strong foundation in these laws and policies, including governance of the World Health Organization, the International Health Regulations, and the WHO Framework Convention on Tobacco Control.

In examining the application and effectiveness of global health law, this course provides a normative foundation for global health issues including infectious diseases (such as COVID-19, HIV/AIDS, tuberculosis, malaria, and influenza) and noncommunicable diseases (such as diabetes, cancer and cardiovascular disease and their causes, including obesity, tobacco, and alcohol).

In this course, students will hear from leading voices in global health and the law and benefit from the expertise of Georgetown Law’s O’Neill Institute.

Recommended: Prior enrollment in International Law I.

Note: Required for the Global Health Law LL.M.

LAW 3028 v00 Global Drug Law and Regulation (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203028%20v00)
LL.M Seminar (cross-listed) | 2 credit hours

Globalization and the international trade of drugs and medical products have progressed beyond any single regulatory authority’s ability to effectively ensure the quality, safety, and effectiveness of these products. In the U.S., the importation of foreign sourced products has increased tremendously, accounting for over 80% of the active pharmaceutical ingredients. However, varying drug regulations have resulted in gaps in oversight causing differing views on the acceptable level of risk in public health leading to drug quality related deaths and other serious harms. One clear reason for this compromised system is the differences in how these products are regulated from country to country. Nevertheless, the pharmaceutical and related industries are thriving in the global marketplace. This course is intended to be the first comparative survey into the regulatory frameworks of certain key countries, both developed and developing markets, along with international institutions, such as the World Health Organization, involved in promoting the access and development of safe, effective and quality medical products. This course will also identify the major international non-governmental stakeholders, and the multi-lateral schemes and treaties in which they operate that are intended to assist in the convergence of pharmaceutical laws and regulations.

Recommended: Prior Enrollment in Food and Drug Law
This course is designed for students to work with faculty and fellows at the O'Neill Institute for National and Global Health Law to gain an in-depth understanding of global health law through intensive examination and role play of one or more major problems in global health. Potential problems could include a naturally occurring infectious disease epidemic such as extensively drug-resistant tuberculosis; a future epidemic such as pandemic Influenza (A) H5N; an intentional introduction of a lethal pathogen such as anthrax; and/or major chronic diseases caused by obesity or tobacco use. Students should come to this course with a basic level of understanding of global health law, including the major international health treaties and governing structures. When studying and role playing these kinds of problems, students will be asked to construct innovative methods of global health governance, drawing upon existing international health law and institutions, along with a vision for more ideal models. The course will also capitalize on materials developed in collaboration with faculty from the School of Nursing and Health Studies for use in the “health care situation room”.

Full attendance and participation is required at all sessions. Class sessions will consist of a combination of lecture, case simulations, and discussion. Grades are based on student participation, a daily journal to be kept by students, and a final paper.

**Note:** A student will be permitted to drop a course that meets for the first time after the add/drop period, without a transcript notation, if a student submits a written request to the Office of the Registrar prior to the start of the second class meeting. Withdrawals are permitted up until the last class for this specific course.

**ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS.** Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety will result in a withdrawal. Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.

---

**LAW 183 v00 Health and Human Rights (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20183%20v00) (Project-Based Practicum)**

**J.D. Practicum | 4 credit hours**

This course explores the potential of using the law, and specifically, the human rights legal framework, to improve health. Students will be exposed to real life projects at the domestic level in a number of different jurisdictions, especially but not exclusively from Latin-America and Africa; as well as at the regional and international level, including the Inter-American Human Rights System and the United Nations Human Rights System. With this approach, students will strengthen not only their knowledge of the human rights framework within their familiar jurisdictions, but will also have the opportunity to develop comparative legal research skills.

The human rights framework that students will learn in depth in this practicum is not limited to the right to health but involves other related human rights that are also social determinants of health or that are instrumental to the effective realization of the right to health. Therefore, students will be exposed to the substantive expertise needed to successfully practice the strategic use of the integrity of the human rights framework in the specific context of health. Students will also be required to consider the use of other legal frameworks that have the potential of having a positive impact on health outcomes.

The variety of projects will take into consideration the complexity and different dimensions of the right to health as well as the nature of the legal obligations that it imposes in different contexts. We will offer projects that respond to current and pressing global challenges with respect to health, for example, projects exploring the right to health and other rights in the context of public health emergencies, the link between health and the environment, the structural disadvantage that specific groups face with respect to their health and the role of private actors, to name a few.

For the execution of their projects, students will work with external partners of the O’Neill Institute for National and Global Health Law, in particular, the Health and Human Rights Initiative (“HHRI”).

**Prerequisite:** J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

**Mutually Excluded Courses:** Students may not concurrently enroll in this practicum course and a clinic or another practicum course. Students may concurrently enroll in this practicum course and an externship.

**Note:** This practicum course is open to LL.M. students, space permitting. Interested LL.M. students should email the Office of the Registrar (lawreg@georgetown.edu) to request admission.

Evening students who work during the day are encouraged to reach out to the professor to discuss whether this practicum course would be compatible with their schedules. This is a four-credit course. Two credits will be awarded for the two-hour weekly seminar and two credits will be awarded for approximately 10 hours of supervised project work per week, for a minimum of 11 weeks. Both the seminar and the project work will be graded. Students who enroll in this course will be automatically enrolled in both the seminar and project components and may not take either component separately. After Add/Drop, a student who wishes to withdraw from a practicum course must obtain permission from the faculty member and the Assistant Dean for Experiential Education. The Assistant Dean will grant such withdrawal requests only when remaining enrolled in the practicum would cause significant hardship for the student. A student who is granted permission to withdraw will be withdrawn from both the seminar and project components. Default attendance rules for all practicum courses (unless the professor indicates otherwise): Regular and punctual attendance is required at all practicum courses (unless the professor indicates otherwise).
One-fifth of the U.S. economy centers around health care industry sectors. This seminar examines criminal, civil and administrative tools used by federal and state enforcement authorities to police the U.S. healthcare system. We will focus on cases brought under federal and state False Claims Acts (FCA), the Anti-Kickback Statue (AKS), Stark laws, Federal Food Drug and Cosmetic Act (FDCA), and Foreign Corrupt Practices Act (FCPA). The seminar provides a survey of the enforcement activities of the U.S. Department of Justice (DOJ), the Office of Inspector General at Department of Health and Human Services (OIG), and state Medicaid Fraud Control Units (MFCUs) in matters against pharmaceutical and medical device manufacturing companies, physicians, hospitals, clinical practices, nursing homes, laboratories, and others. The seminar materials thoroughly cover the statues, safe-harbors, and regulations that govern the health care industry. We will also discuss risk mitigation strategies and compliance program best practices across industry sectors to provide insight into the impact enforcement has on (1) clinical decision-making, (2) costs to providers, payers, and patients, (3) patient safety, and (4) quality of care. In an effort to maintain a broad perspective with the diverse and frequently changing legal landscape in the area, in addition to the case book, materials discussed and presented in this course draw from news reports, trade publications, and U.S. government agency materials.

The class requires a paper of approximately 20-25 pages in length.

**Recommended:** Criminal Justice (or Democracy and Coercion) or Criminal Procedure.

**LAW 1028 v00 Health Care Fraud and Abuse Seminar**

This course is Georgetown Law's introduction to the law and policy of health care provision and financing. No single course can serve as a comprehensive introduction, and this class won't try. Rather, we'll consider central themes and selected topics, with an eye toward the larger questions that drive legal, political, and ethical conflict in the health sphere. We'll begin with some context – the non-medical determinants of health, which have much greater influence on population-wide health than does clinical care. We'll then turn to the idea of a right to health care, then to the roles of markets and government in making care available and containing medical costs. Next up will be an introduction to the Affordable Care Act, with an eye toward its conceptual framework, its critics' core objections, and the main problems that it has left unresolved. We'll examine some of the legal conflicts that have arisen over the ACA, then turn to brief introductions to several other areas of health care law, including medical malpractice, antitrust, and the role of for-profit vs. non-profit institutions. We'll finish with consideration of racial disparities in health care and tension between medicine's clinical and social roles. COVID-19 has put a spotlight on our medical care system's shortcomings, as well as the social inequities that shape Americans' health and well-being. Our nation's response to COVID will thus play a substantial role in this year's edition of the course – as both a matter of national urgency and a window onto these shortcomings.

**LAW 206 v03 Health Care Law and Policy**

This course is Georgetown Law's introduction to the law and policy of health care provision and financing. No single course can serve as a comprehensive introduction, and this class won't try. Rather, we'll consider central themes and selected topics, with an eye toward the larger questions that drive legal, political, and ethical conflict in the health sphere. We'll begin with some context – the non-medical determinants of health, which have much greater influence on population-wide health than does clinical care. We'll then turn to the roles of markets and government in making care available and containing medical costs. Next up will be an introduction to the Affordable Care Act, with an eye toward its conceptual framework, its critics' core objections, and the main problems that it has left unresolved. We'll examine some of the legal conflicts that have arisen over the ACA, then turn to brief introductions to several other areas of health care law, including medical malpractice, antitrust, and the role of for-profit vs. non-profit institutions. We'll finish with consideration of racial disparities in health care and tension between medicine's clinical and social roles. COVID-19 has put a spotlight on our medical care system's shortcomings, as well as the social inequities that shape Americans' health and well-being. Our nation's response to COVID will thus play a substantial role in this year's edition of the course – as both a matter of national urgency and a window onto these shortcomings.

**LAW 3140 v00 Health Equity and Social Justice**

This course will examine the social, legal, and economic systems in the United States that have precipitated health inequities for different populations throughout history. Students will develop an intense understanding of U.S. public health law and policy constructs and the varied social determinants of health that affect public health outcomes by exploring how past and current U.S. law and policy perpetuate disparities. This course will also explore how legal and policy reform can be utilized to promote health equity and eliminate injustices across populations. Topics covered in the course include health disparities in the U.S. among LGBTQ, immigrant, rural, and minority populations; substance use policy; maternal and child health; and environmental health. The course will utilize various learning modalities such as research review, discussion, case studies, and guest lecturers. By the conclusion of the semester, students will be equipped with tools to leverage the law to improve health outcomes and the skills necessary to become successful practitioners working at the intersection of public health administration and law.
Health Law, Policy, and Bioethics

LAW 2037 v00 Health Information Technology and the Law
LL.M Seminar (cross-listed) | 2 credit hours
Health care decision-making and innovation are increasingly driven and made possible by vast stores of data. The importance of data has created an inevitable push-pull dynamic between concerns for confidentiality and demands for medical progress and cost containment. Data is both a privacy risk and a tremendous asset. This course will explore the legal and ethical issues at the intersection of health information, including where data comes from, how it is and should be protected, how it can be used, and risks to its integrity and security. In doing so, this course will cover a range of topics including health information privacy, future use of data assets, and conflicts of interest.

Note: This course is part of the following graduate programs: Master of Law and Technology Technology Law & Policy LL.M.

LAW 627 v00 Health Justice Alliance Law Clinic
J.D. Clinic | 10 credit hours
Please see the Health Justice Alliance Law Clinic website for more detailed information about the program.

For registration-specific supplemental materials, please see the Health Justice Alliance Law Clinic PDF.

For information about clinic registration generally, please see the Clinic Registration Handbook.

Mutually Excluded Courses: Students may not concurrently enroll in this clinic and an externship or a practicum course.

LAW 2076 v00 Health Law and Regulation
LL.M Course (cross-listed) | 3 credit hours
Beyond health insurance and the delivery of health care, goods and services related to individual and public health are highly regulated in the United States, and often serve as a basis for international regulations. These goods and services are a large and growing part of the U.S. and world economy, with some estimates being that more than one-quarter of U.S. food and medical products are regulated by the FDA alone. This regulation is carried out directly by a variety of State and Federal agencies (such as the FDA, the CDC, and the NIH) as well as indirectly through the purchasing power of federally financed programs, such as Medicare.

This course will include an introduction to the basic legal and regulatory frameworks within public health and an overview of the Constitutional limits and policy choices that have led to current law. The course will then move to a review of several major fields of regulation. From a high-level, this includes the regulation of health professionals, health systems, and medical or food products impacting human health. The course will then conclude with an examination of several contemporary problems, such as the safe and effective use of human drug products, infectious-disease prevention and control, ethical research practices, and rationing and allocation of limited resources.

The primary objective of the course is to teach students about the regulation of public health at the intersection of state and federal levels, recognizing that such regulatory frameworks often become the template for international policies. Students will be called on to learn the basics of two fundamental statutes—the Public Health Service Act (PHSA) and the Food, Drug and Cosmetic Act (FDCA). Students will also be called upon to follow examples of administrative change under these statutes, each year analyzing a new set of proposed regulations and sub-regulatory guidance documents. By the end of the course, students will be able to describe the major means by which goods and services used in both personal and public health are controlled, as well as areas in which future changes are likely.

Currently, there is no text or case book on this subject. The primary readings will be assigned by the professor.

Note: This is a required course for the US Health Law Certificate.
LAW 1700 v00 Healthy Living, Aging, and Dying Seminar: The Legal Determinants of Wellbeing (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201700%20v00)
J.D. Seminar (cross-listed) | 2-3 credit hours
This course examines law as a determinant of health throughout the lifecycle, including direct regulation, indirect regulation through the courts, deregulation of legal barriers to health, the authority to tax and spend to influence behaviors, and powers to alter socio-economic, informational, and physical environments. It covers both domestic and international legal and policy strategies.

Health outcomes and life expectancy increasingly are socially determined. In the United States, for example, life expectancy has dropped three years running, mostly due to diseases of despair (e.g., illicit drug and opioid overdoses, suicides, and depression) among low and middle-income Americans. It will explore how law and regulatory reform can improve health and longevity among all socioeconomic groups.

Part I analyzes the role of law and policy in preventing chronic non-communicable diseases (NCDs) such as cardiovascular disease, cancer, diabetes, and respiratory disease. It explores international instruments, such as the Framework Convention on Tobacco Control, and domestic interventions to reduce use of tobacco, alcohol, and vaping products. Importantly, law and regulatory reform can effectively promote healthy diets and physical activity across the life-course.

Part II examines the social and economic impacts of aging populations, with a focus on legal and policy interventions for healthy aging. It explores social isolation and the importance of recreational spaces, social connectedness, mental health, and prevention of injuries among the elderly (both unintentional and elder abuse). It will also examine "macro" policies such as the social and economic impacts of aging populations, and what governments and societies can do to encourage productivity and manage costs.

Part III covers legal and ethical issues around the concept of a "good death," including palliative care, end of life decision-making, and voluntary assisted death. Everyone wants to live a healthy life, without major disability. But they also want to die with dignity. How can society be structured to empower people to have a "good death?"

In addition to analyzing population level interventions to promote health and wellness, the course integrates personal, family, and societal health and wellbeing. Students will have the opportunity to reflect on how to keep themselves and their loved ones healthy and balanced, including lifestyles conducive to health, peacefulness, wellbeing, social engagement, and productivity.

NCDs are a global pandemic, representing 70% of all global mortality. Well-structured laws and policies have the power to prevent premature disease, disability, and premature death, and promote health and wellbeing in ageing societies. This course will educate and actively engage students on the legal issues surrounding disease prevention and health promotion across the life-course and offer analysis of innovative policy opportunities to structure health systems, food systems, and communities that promote individual and public health.

Description of student learning goals:

1. Understand the social and economic impacts of population aging and the global non-communicable disease pandemic.
2. Analyze law and policy as a determinant of health and well-being, with a focus on legal interventions to reduce NCD risk factors (e.g. tobacco use) and promote healthy aging and dying.
3. Compare regulatory approaches to health promotion, including direct regulation, the authority to tax and spend to influence behaviors, and powers to alter socio-economic, informational, and physical environments.

LAW 1286 v00 Human Trafficking and Modern Slavery in the 21st Century: Legal Perspectives (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201286%20v00)
J.D. Seminar (cross-listed) | 2 credit hours
Slavery has been a phenomenon that has existed since before written history, yet it is only in the last 200 years that efforts to abolish it have gained traction. Today, increasing mobility, global supply chains, and continued social discrimination have created the environment for ongoing human exploitation, even though the formal practice of chattel slavery, or the legal ownership of one human being by another, is illegal virtually everywhere. Indeed, some estimate that there are more slaves today than at any other time in human history. Most recently, efforts to eliminate severe forms of human exploitation are being made under the banner of ending human trafficking (or more formally, trafficking in persons).

This course will provide students an overview of the multiple legal perspectives on combating human trafficking and modern slavery. This will include the definitional tensions between different perspectives, alternative approaches to addressing severe human exploitation, and an overview of the current U.S. legal framework for eradicating human trafficking and modern slavery and its weaknesses. Attention will be paid to commonly recognized principles in human rights, criminal and labor law, but also in such areas as corporate responsibility and international humanitarian law. The class will use a range of materials, including international treaties, decisions of international and foreign tribunals, and more familiar U.S. statutory materials and legislative history (such as committee reports).

Learning Objectives:

At the conclusion of the class, students should be able to

- recognize many of the forms of and pervasive nature of human trafficking and modern slavery;
- identify risks of human trafficking and modern slavery in most areas of practice they may choose in the future; and
- have familiarity with emerging issues in the area of human trafficking and modern slavery.

Recommended: A prior course in public international law or international human rights.

Mutually Excluded Courses: Students may not receive credit for both this seminar and Human Trafficking in International and Transnational Law.
By the end of this course, students will be able to:

- Identify and interpret relevant authorities and limitations that underpin Indigenous access to health care
- Identify and understand specific regulations, guidance, and laws applicable to providing health care to US tribal governments
- Gain knowledge on the right to self-determination
- Master vocabulary and terminology associated with Indigenous rights and health law
- Understand the linkage of national health systems to the United Nations including the UN Permanent Forum on Indigenous Issues; and UN Declaration on the Rights of Indigenous Peoples
- Compare and analyze legal instruments and structures from other countries, including New Zealand, Australia, and Canada with the United States

Recommended: Administrative Law; Federal Indian Law.
LAW 233 v01 Intellectual Property and Medicines (http://
curriculum.law.georgetown.edu/course-search/?keyword=LAW
%20233%20v01)
J.D. Seminar (cross-listed) | 2-3 credit hours
This course examines the special legal and policy issues arising
from the use of intellectual property rights in the pharmaceutical and
biotechnology fields. The course will cover: (1) U.S. case law impacting
intellectual property, patents, trademarks and copyrights in drugs
and biologics; (2) the interplay of the regulatory approval process for
therapeutic products with intellectual property rights; (3) the Hatch-
Waxman Act and its impact on how patent rights for pharmaceuticals
are procured and enforced; and (4) major legislative developments
affecting the use of intellectual property rights in the drug, biotechnology
and medical device fields, such as the Biologics Price Competition and
Innovation Act of 2009 and the America Invents Act of 2011. Other
topics may be included depending on current judicial or legislative
developments. A background in biologics or pharmaceuticals is not
required, although completion of a basic patent law or a food and drug
law course is recommended.

Students will have the option of taking this course for either two or three
credits. The three credit option will require a paper that satisfies the
upperclass legal writing requirement in compliance with Law Center
regulations. The two credit option will require completion of a final
paper or of several shorter legal writing samples on student-selected or
assigned topics.

Strongly Recommended: Prior or concurrent enrollment in a basic patent
law course or food and drug law course is highly recommended.

Note: This seminar requires a paper. J.D. students must register for the
3 credit section of the seminar if they wish to write a paper fulfilling
the Upperclass Legal Writing Requirement. The paper requirements
of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing
Requirement.

LAW 802 v01 International Assistance for Global Health (http://
curriculum.law.georgetown.edu/course-search/?keyword=LAW
%20802%20v01)
LL.M Course (cross-listed) | 1 credit hour
The overall objective of this course is to explore the present and potential
role of international human rights law – and the right to health in
particular – in international assistance for global health.

During the first class, we will discuss the recent history and present
practice of international assistance for global health. We will discuss
tensions between the objectives of development and relief, and between
the objectives of promoting ‘health security’ and equity in global health.
During the second class, we will explore the concept of equity in global
health: how it is central to several definitions of global health; what
the practice of international assistance for global health should look
like, if the predominant objective of that assistance were equity. During
the third class, we will examine the meaning of the right to health, the
freedoms and entitlements it generates and the corresponding national
and international responsibilities. During the fourth class, we will discuss
if and how the right to health can be used to modify/improve the practice
of international assistance for global health, taking into account that
such assistance serves other objectives as well.

Strongly Recommended: Completion of coursework in the area of
international human rights law.

Note: ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled
students must be in attendance at the start of the first class session in
order to remain enrolled. Waitlisted students must be in attendance at the
start of the first class session in order to remain eligible to be admitted
off the waitlist. All enrolled students must attend each class session
in its entirety. Failure to attend the first class session in its entirety will
result in a drop; failure to attend any subsequent class session in its
entirety may result in a withdrawal.

Enrolled students will have until the beginning of the second class
session to request a drop by contacting the Office of the Registrar;
a student who no longer wishes to remain enrolled after the second
class session begins will not be permitted to drop the class but may
request a withdrawal from an academic advisor in the Office of Academic
Affairs. Withdrawals are permitted up until the last class for this specific
course. The take-home exam in this course may be administered mid-
semester and the specific exam date will be provided by the professor
after the add/drop period.
LAW 145 v00 International Environmental Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20145%20v00)
J.D. Course (cross-listed) | 3 credit hours
The course focuses on international law applicable to the leading environmental and natural resource issues. It provides a framework for identifying and addressing the legal issues, links international law with relevant national laws, and focuses on ways to strengthen compliance with international obligations. The course covers climate change, ozone depletion, transboundary pollution and hazardous waste disposal; natural resource issues of fresh water (both surface and ground water), marine resources, and biodiversity; the links between human rights and environment and between environment and trade; and the financing of sustainable development. Special attention is given to cutting edge issues, such as synthetic biology and climate intervention.

Learning goals for this course: To enable students to become effective counsel, litigators, negotiators, arbitrators, judges, or legal advisors on a broad range of international environmental and natural resource problems; to understand international negotiations; and to be able to apply legal concepts developed in the course within different national settings for implementing international law.

LAW 227 v04 International Human Rights (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20227%20v04)
J.D. Course (cross-listed) | 3 credit hours
This course examines the law, institutions, and advocacy strategies designed to protect international human rights. We will analyze civil and political rights and economic and social rights, as well as international humanitarian law, and explore key enforcement mechanisms at the national, regional, and international levels. The evolving role of NGOs and civil society actors in advancing human rights, and the responsibility of corporations, will also be examined. Both progress and enduring challenges in making human rights real “on the ground” will be a focus of this course, together with the need for effective enactment of legal standards, enforcement of those standards, and empowerment of affected communities. Current legal issues and strategies concerning climate change and human rights will also be highlighted.

Recommended: International Law I: Introduction to International Law.

Mutually Excluded Courses: Students may not receive credit for both this course and the graduate course, International Human Rights Law.

LAW 3006 v00 International Right to Health (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203006%20v00)
LL.M Course (cross-listed) | 2 credit hours
The course provides an introduction to the human right to health and its implementation in a few hot topic issues. Issues covered will include criminalization of drug use and sexual and reproductive health, vulnerable groups, HIV/AIDS, the intellectual property regime and access to medicines, and a critique of the current framework and the challenges that impede the realization of the human right.

Recommended: Introductory course in public international law or human rights, introduction to public international law and/or introduction to human rights

Note: ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal.

Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.

LAW 520 v00 International Women’s Human Rights Clinic (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20520%20v00)
J.D. Clinic | 10 credit hours
Please see the International Women’s Human Rights Clinic website (https://www.law.georgetown.edu/experiential-learning/clinics/international-womens-human-rights-clinic) for more detailed information about the program.

For registration-specific supplemental materials, please see the International Women’s Human Rights Clinic PDF (https://georgetown.app.box.com/s/rq9mhfjda1jrp8sa5vbhctvzjgc8ivnt).

For information about clinic registration generally, please see the Clinic Registration Handbook (https://georgetown.box.com/s/y9f8wg3jqcuynnevip3ytyrfl6nj9ppyv).

Mutually Excluded Courses: Students may not concurrently enroll in this clinic and an externship or a practicum course.
LAW 199 v03 Law and Regulation of Drugs, Biologics and Devices
(http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20199%20v03)

J.D. Course (cross-listed) | 3 credit hours
This course explores the legal, regulatory and policy issues that shape the research, development, and commercialization of drugs, biologics, and medical devices in the United States. We will consider the history and role of federal regulation of medical technologies; legal and ethical issues in the development and testing of new therapies; managing incentives for innovation, including patent, regulatory and data exclusivity; tort liability and its function in the regulation of the life sciences industry; and other issues. We will explore these issues using real-world examples, including the government and industry response to the COVID-19 pandemic.

Recommended: Prior or concurrent enrollment in Administrative Law.

Note: This is a required course for the Food and Drug Law Certificate.

LAW 915 v00 Law, Healthy Lifestyles, and Business Regulation
(http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20915%20v00)

LL.M Seminar (cross-listed) | 1 credit hour
This course is about legal responses to tobacco use, obesity, poor diet, harmful use of alcohol and sedentary lifestyle – the leading causes of preventable disease in the United States, in high-income countries generally, and increasingly, in developing economies. Cancer, heart disease, stroke, diabetes and tobacco-related diseases (known as “non-communicable diseases” or NCDs) are society’s greatest killers, but what can law do – and what should it do – to prevent and manage them?

Unlike other global health threats, NCDs and their risk factors are partly caused by patterns of consumer choices and transactions lived out every day across the country. The challenge of creating healthier lifestyles cannot be separated, then, from the regulation of those businesses that all too frequently have a vested interest in unhealthy lifestyles.

Law’s relationship with tobacco, alcohol and food is complex and contested. Nevertheless, governments around the world are experimenting with a wide range of legal strategies to encourage healthier lifestyles. This course places U.S. developments in a global and comparative context, offering comparisons with legal strategies for encouraging healthier lifestyles in Australia and other countries.

During the course, we will confront some important over-arching questions. What are the global determinants of NCDs, and how are these diseases being managed, globally? What do the global solutions look like? To what extent should law intervene to influence the behavior of populations – as distinct from treating lifestyle-related risk factors matters for personal responsibility? Does a regulatory approach to the prevention of NCDs imply coercion? Does it signal the emergence of a “nanny state”? Do legal approaches to reducing NCD risks necessarily depend on motivating people to consciously change their lifestyles, or can laws embody different strategies? Is it possible to regulate business without micro-managing or dictating commercial decisions and “legislating the recipe for tomato ketchup?”

Most people want to live longer and healthier lives. Yet no country can achieve this without addressing the preventable risk factors that drive non-communicable diseases. This course gives students the conceptual tools to think powerfully about law’s role in the prevention of NCDs, and to participate effectively in debates about appropriate, workable, legal interventions.

Note: WEEK ONE COURSE. This course will meet for one week only on the following days: Monday, January 09, 2023 through Thursday, January 12, 2023, 9:00 a.m. - 12:20 p.m.

This course is mandatory pass/fail and will not count toward the 7 credit pass/fail limit for J.D. students. ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal. Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.
LAW 3047 v00 LGBTQ Health Law and Policy (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203047%20v00)

LL.M Seminar (cross-listed) | 2 credit hours
Despite significant progress in legal protections for (and the visibility of) LGBTQ and non-binary people over the past decade, LGBTQ communities continue to face systemic obstacles to quality health care such as refusals of care, substandard care, and inequitable policies and practices in many health care settings. These experiences of discrimination correlate with significant health disparities, including greater exposure to sexual and gendered violence, higher rates of tobacco and other substance use, mental health concerns, HIV acquisition, and cancer. These disparities are even more pronounced for LGBTQ people who are also members of other groups that face discrimination because of race, ethnicity, or other aspects of identity—such as people of color, young and older people, people with disabilities, low-income people, and immigrants, among others.

In this seminar, students will learn about LGBTQ health law and policy issues from a variety of perspectives—including medicine, public health, women's studies, and U.S. foreign policy—and gain a better understanding of the social mistreatment and ostracism of LGBTQ people at both the individual and community level. Topics covered will include LGBTQ-inclusive data collection, clinical and cultural competency, reproductive justice, international human rights law, and health issues facing LGBTQ youth and elders. This course will also examine the ways in which LGBTQ individuals and families are treated under federal, state, and international law and how these policies impact access to health care and contribute to health disparities.

LAW 593 v00 National and Global Health Law: O'Neill Colloquium (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20593%20v00)

J.D. Seminar (cross-listed) | 2-3 credit hours
In this interdisciplinary colloquium, leading national and international scholars in a range of domains will explore fundamental normative and policy problems of contemporary concern in health law. Topics will include health care, public health, global health, science, regulation, politics, ethics, and policy. The colloquium will have participants from across the Georgetown University campus among faculty, senior administration, and students, as well as participants in the Washington health policy and legislative community.

Each seminar session will focus on a presentation by, or structured dialogue with, distinguished guest speakers. Students from the Law Center and other schools within Georgetown University (including Nursing and Health Studies, Medicine, Arts and Sciences, Foreign Service, Business, and other graduate programs) will be expected to prepare for intensive discussions in which experts, faculty and students explore, analyze and deepen their understanding of issues selected for consideration each month. The colloquia will be open to other students and faculty members across Georgetown University as well as interested members of the public, particularly professionals working in health law and policy in Washington.

Mutually Excluded Courses: Students may not receive credit for this course and Pandemics, Global Health, and the Law Seminar.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.
LAW 2099 v00 Nutrition Law and Policy (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%202099%20v00)

LL.M Seminar (cross-listed) | 2 credit hours

Proper nutrition is one of the many contributor's to overall health and could be one of the most cost-effective approaches to address many of societal, environmental and economic challenges facing the world today. Increasingly, law and policy has been recognized as a high-impact and robust approach for accelerating progress toward reducing and managing nutrition-related chronic diseases such as obesity, cardiovascular disease, type 2 diabetes mellitus and certain types of cancer. In various jurisdictions, policymakers enact courses of action, regulatory measures, laws and policies, and set funding priorities designed to address food insecurity, hunger, obesity prevention, chronic diseases, among other health and well-being concerns. This course focuses on policies, programs and practices across the globe—at the national, tribal, state and local levels—that improve or hinder healthy eating. Students will examine the evidence informing these courses of action, along with the historical and contemporary legislative, regulatory and judicial aspects. Topics and themes include dietary guidance, food and nutrition assistance programs, food and nutrition labeling, and other environmental and policy strategies to improve access to healthier foods and beverages.

Student Learning Goals:

- Identify key law and policy approaches used across the globe that have been used or have the potential to improve or hinder healthy eating;
- Discuss and debate the historical and contemporary legislative, regulatory and judicial aspects of the key nutrition law and policy approaches during collaborative in-class exercises; and
- Execute analytical and strategic planning for developing, implementing, evaluating, and sustaining a nutrition law and policy approach during in-class exercises and as part of the mid-term and final projects.

Recommended: Constitutional Law, Property, Contracts, Torts, as well as Food and Drug Law, Introduction to Health Law, and Land Use and Planning.

LAW 1209 v02 O'Neill Institute Practicum: Regulating Alcohol, Tobacco & Food in International and Comparative Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201209%20v02) (Project-Based Practicum)

J.D. Practicum (cross-listed) | 4 credit hours

In a project-based practicum course, students participate in a weekly seminar and work on a project under the supervision of their professors. This course explores the challenges and opportunities of using law to address risk factors that contribute to the rising prevalence of NCDs, such as unhealthy diets, tobacco use, and alcohol consumption. By taking an international and comparative approach, it navigates the theory behind the regulation of risk factors to NCDs in relation to concrete examples from around the world, with a particular emphasis on Latin America, where considerable progress has happened in recent years. Students will participate in a two-hour/week seminar and carry out 10 hours/week of project work under the direction of the course professors.

SEMINAR: In every class, students will learn substantive content and develop lawyering skills, leading to a comprehensive understanding of the role of law in relation to risk factors to NCDs, including in policy, advocacy, and litigation. Specifically, students will be introduced to NCDs (definition, risk factors, and global burden); understand the role of corporations as drivers of NCDs; learn about regulations to address NCDs, such as pricing and taxation, labelling and packaging, and restrictions to marketing and advertising; and explore the strengths and weaknesses of regulatory, advocacy, and litigation approaches to NCDs. In navigating these topics, students will develop a set of lawyering skills, including generating and using evidence, monitoring policy, building coalitions, conducting scenario-planning, engaging decision-makers, segmenting audiences, and framing arguments.

PROJECT WORK: On the experiential/field-work side, students will work with external partners of the O'Neill Institute for National and Global Health Law (and the newly created Global Center for Legal Innovation Food Environments) on legal and policy projects related to NCDs and the law. For example, students may draft alternative reports to UN bodies analyzing compliance with human rights obligations related to unhealthy diets, tobacco use, or alcohol consumption (e.g., “shadow reports”). Such a report could analyze the prevailing legal frameworks in a particular country and highlight strengths and weaknesses in the statutory and regulatory language. By working with the O'Neill Institute and civil society organizations, the course gives students the opportunity to use law to address critical health challenges.

Prerequisite: J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Mutually Excluded Courses: Students may not concurrently enroll in this practicum course and a clinic or another practicum course. Students may concurrently enroll in this practicum course and an externship.

Note: This practicum course is open to LL.M. students, space permitting. Interested LL.M. students should email the Office of the Registrar (lawreg@georgetown.edu) to request admission.

Evening students who work during the day are encouraged to reach out to the professor to discuss whether this practicum course would be compatible with their schedules. This is a four-credit course. Two credits will be awarded for the two-hour weekly seminar and two credits will be awarded for approximately 10 hours of supervised project work per week, for a minimum of 11 weeks. Both the seminar and the project work will be graded. Students who enroll in this course will be automatically enrolled in both the seminar and project components and may not take either component separately. After Add/Drop, a student who wishes to withdraw from a practicum course must obtain permission from
The course will address the legal response to epidemic disease, focusing particularly on the World Health Organization’s International Health Regulations (IHR), including the process for deciding whether to declare a Public Health Emergency of International Concern (PHEIC) (including historical examples of COVID-19, Ebola, Zika, MERS, Yellow Fever, polio, pandemic influenza, and more). It will also look at other legal mechanisms for pandemic preparedness, such as the Pandemic Influenza Preparedness Framework and examine reforms to global governance for health emergency preparedness that have been proposed as a result of the COVID-19 pandemic.

Prof. Lucey will provide his personal perspective based on on-the-ground work in responding to Ebola, COVID-19, Zika, MERS, SARS Flu, Plague, and more. This work overseas led to his proposal in 2014 to create an Exhibition on Global Epidemics at the Smithsonian Museum of National History, which opened in 2018 and has been extended to 2022 to add COVID-19. The class will include a tour of this exhibit.

The course will be discussion-focused, including readings, videos, interactive lectures, and classroom outbreak simulation (“tabletop”) exercises. During these exercises students will be given a fact pattern and assigned a role (e.g., the WHO Director-General, US Centers for Diseases Control and Prevention (CDC) officials, NGOs, etc.) and asked to negotiate with others and reach agreement.

Note: ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal.

Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course. This course is mandatory pass/fail and will not count toward the 7 credit pass/fail limit for J.D. students. Grading is based on participation in the final simulation exercise (no papers or exams).
LAW 508 v02 Policy Clinic (Harrison Institute for Public Law) (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20508v02)
J.D. Clinic | 8 or 14 credit hours
Students in the Policy Clinic provide services to make democracy work across several policy themes. Recent projects include:

- **Community equity** – Combat gentrification and displacement in low-income communities of color; develop a community support fund, develop a community resilience hub.
- **Health and food** – Organize a consortium to improve working conditions in university food supply chains, expand access to oral health services, reinvent a better food chain for institutions (universities, hospitals, schools, and shelters), analyze social determinants of health (housing, food security, etc.) for state health officials.
- **Labor and human rights** – Organize a consortium to improve working conditions in university food supply chains (same as health above), protect worker rights in global supply chains for the FIFA World Cup and other mega-sporting events.
- **Trade and climate** – Develop mutually supporting climate and trade policies, develop options for international cooperation on climate policies through “climate clubs,” recommend strategies to decarbonize steel production without violating WTO rules, and identify strategies for reducing greenhouse gas emissions while preserving manufacturing jobs.

Please see the Policy Clinic website (https://www.law.georgetown.edu/experiential-learning/clinics/the-policy-clinic-climate-health-food-human-rights-and-trade-harrison-institute) for more detailed information about the program.

For registration-specific supplemental materials, please see the Policy Clinic PDF (https://georgetown.app.box.com/s/dscfc6bup44kjfwxk6pmmyjinw77fqz04).

For information about clinic registration generally, please see the Clinic Registration Handbook (https://georgetown.box.com/s/y9f8wg3jvqcynepv3tytyr6nj9pyv6).

Learning outcomes for this clinic: Students are supervised, evaluated and graded on three skill sets, each of which has specific evaluation criteria in the Policy Clinic Operations Guide. (https://www.law.georgetown.edu/wp-content/uploads/2022/04/2021-22-Policy-clinic-operations-8-12-21-v3.docx)

1. **Management and professionalism** – includes “managing up” with supervision meetings, initiating self-evaluation, managing effort and deadlines, collaborating, and expectations in a professional culture.
2. **Analysis and strategy** – covers legal, policy, and strategic analysis. It includes identifying issues that require analysis, learning the context efficiently, using diverse sources to avoid bias, explaining analytic methods, using a logical framework, and drawing conclusions that meet client needs.
3. **Communication, writing and speaking** – includes organizing documents and presentations, meeting audience needs for context and decision-making, relating analysis through stories and examples, presenting visual information, and editing for plain language, clarity, and English style.

**Recommended:** Legislation and Administrative Law. Also, for climate projects: Local Government Law; and for trade or human rights projects: International Law I, International Trade (various titles), World Trade Organization: Law, Policy and Dispute Settlement, and International Human Rights.

**Mutually Excluded Courses:** Students may not concurrently enroll in this course with:

- LAW 1288 v00 Politics of Litigation and Litigation of Politics (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%201288%20v00)
J.D. Seminar (cross-listed) | 2 credit hours
Many of the most important and intense political disputes in American history have come before the federal courts. From the controversy about the midnight judges reflected in *Marbury v. Madison*, to the conflict about slavery at the core of *Dred Scott*, to the rise of interest group litigation by civil rights, religious, environmental, and other organizations, those opposed to prevailing laws and policies have taken their grievances to court. In recent years, a new breed of political litigation has proliferated. Increasingly, the losers in legislative and electoral battles have leapt immediately into the judicial arena, challenging the constitutionality of the laws enacted over their objection or the way elections are run. Increasingly, politicians and the entities they control have deployed litigation as another tool in the partisan arsenal. And increasingly, federal courts have become the arbiters of political disputes between the other two branches of the Federal Government, and between the Federal Government and the States, and between political candidates.

This course will use the legal challenges to the Affordable Care Act as an initial case study of how political disputes play out in litigation, from the trial courts to the Supreme Court. We will follow the pattern of political litigation into the Trump and Biden Administrations, and assess the lessons from the partisan shift in the litigation. We will consider how and why partisan disputes generate litigation and discuss the issues this litigation raises regarding the appropriate role of courts in our democratic system. In large part, the perspective will be practical, as we explore the legal, strategic, and tactical choices advocates make in bringing high profile political cases, in framing the legal issues, in harnessing the rules of procedure, and in managing the political features of the case – both offensively and defensively, and both inside and outside the courtroom. We will discuss the hurdles litigants face in seeking to strike down federal laws, the particular challenges of representing the U.S. Government in defending those laws, and the conflicting pressures that bedevil advocates on both sides of the cases. In some of our sessions, students may be asked to strategize or to argue from the perspective of the plaintiffs or the defendant in the cases.

**Prerequisite:** Constitutional Law I: The Federal System (or Democracy and Coercion).

**Recommended:** Prior or concurrent enrollment in Federal Courts and the Federal System.
LAW 995 v00 Public Health and International Investment Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20995%20v00)
LL.M Course (cross-listed) | 1 credit hour
The objective of this 1 credit course is to introduce students to the relationship between international laws governing foreign investment and efforts to protect and promote human health. The course will examine the extent to which bilateral investment treaties (BITs) and investment chapters in trade agreements limit domestic regulatory autonomy, particularly in the field of public health.

International investment law is comprised of over 3000 BITs, which govern the acceptance and treatment of foreign investment. BITs impose various rules limiting the freedom of domestic policy-makers, including rules governing national treatment, most-favored-nation treatment (principles of non-discrimination), fair and equitable treatment, and expropriation. Foreign investors, including trans-national corporations, are increasingly using these rules to challenge domestic regulations such as public health measures.

The course will address:
1. the theoretical perspectives underlying the international law of investment and the concept of police powers (particularly the power to protect health);
2. the different types of legal tests used to determine the regulatory legitimacy of a measure as well as the impact of varying standards of proof on analysis of this type;
3. rules governing expropriation of property rights and the circumstances in which health and environmental health measures might be considered equivalent to expropriation;
4. rules governing fair and equitable treatment as used in determining the legitimacy of domestic regulatory measures;
5. rules governing non-discrimination and their potential impact on domestic health measures that are non-discriminatory in form;
6. rules governing arbitrary or discriminatory measures; and
7. procedural issues relating to the participation of civil society in the negotiation of investment treaties and the settlement of investment disputes.

There are no prerequisites for the course, although familiarity with international law or global health law is desirable. The course is ideal for students in the Global Health Law LLM program or for other students wanting a course on international investment law.

Prerequisite: Familiarity with international law or global health law is helpful, but not required.

Note: ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal.

Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course. The take-home exam in this course may be administered mid-semester and the specific exam date will be provided by the professor after the add/drop period.

LAW 364 v06 Public Health Law and Ethics (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20364%20v06)
J.D. Course (cross-listed) | 3 credit hours
This course explores the interwoven dynamics of legal and ethical aspects of public health issues in the United States and abroad, including infectious diseases, tobacco use, obesity, and the environment, among others. This course will be valuable for students interested in global health law, as well as students looking to broaden and deepen their expertise in preparation for a career in health law more generally.

This course will proceed in three movements. First, it will consider the conceptual foundations of public health law in the United States through the lens of governance, ethics, and human rights, affording particular attention to the statutory and regulatory powers and duties of federal and state governmental entities to protect the health and safety of the population. Second, it will examine the sources of tension between the objectives of public health and civil liberties including, among others: labeling and advertising restrictions and free speech; disease surveillance and privacy; and considerations in personal versus population-based conceptions of health. Lastly, this course will conclude by considering emerging public health issues at the intersection of law and ethics, such as biosecurity, vaccine policy, and the role for public health in broader discussions around health care reform in the United States.

LAW 364 v07 Public Health Law and Ethics (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20364%20v07)
J.D. Course (cross-listed) | 3 credit hours
This course explores the interwoven dynamics of law, ethics, and science in public health through examination of core legal theory and practice-based examples. With COVID-19 ushering law, policy, and decision-making around public health into broad public awareness, this class will draw upon current and emerging issues in society, enabling students to apply legal and ethical concepts to real-world scenarios. By spotlighting recent and historical examples of public health law in action, including COVID-19 and other infectious diseases, tobacco use, obesity, the environment, and the broader social determinants of health, this course will be valuable for students interested broadly in health law and equity, as well as students seeking to deepen their expertise in public policy.

Students will learn the conceptual foundations of public health law in the United States, with particular attention to the statutory and regulatory powers and duties of federal and state governmental entities to protect the health and safety of the population and the judicial decisions that shape them. Sources of tension between public health goals and objectives and civil liberties will be interactively contemplated, including, among others: disease surveillance and privacy; labeling and advertising restrictions and free speech; and considerations around individual versus population-based conceptions of health. Throughout the course, students will engage with public health law through applied learning—case studies and exercises—focused on addressing public health issues, comparing national and global responses, and developing legal and policy strategies that integrate health equity.
Serving as a lawyer to a PPP provides an exceptional challenge because the tools and strategies that work when counseling in the public sector may be strange or ill fit for purpose in the private sector (and vice versa). Effective PPP lawyers are translators and guides: they ‘speak both languages’ thus positioning themselves to propose innovative, non-obvious solutions and can build trust with, and among, partners and stakeholders. Bridging theory and practice, students will have the opportunity to understand why PPPs have emerged and the theoretical basis under which they operate. They will also receive practical tools and knowledge to allow them to work with or within a PPP and discuss and debate sophisticatedly how they should be managed and governed.

To do this, the course uses a mix of lecture, discussion, video, and experiential learning. It will start by examining and contrasting the key organizational, legal, and governance components of public-sector institutions and corporate entities. Students will then analyze several kinds of PPPs including global health partnerships, innovative finance institutions, and biomedical research consortia. In particular, they will examine applicable international, corporation, and regulatory law and seek to understand the choices these partnerships make in applying a particular mix of public-sector and corporate norms. We will seek to understand the high profile COVID-19 PPPs such as COVAX, Accelerating COVID-19 Therapeutic Interventions and Vaccines (ACTIV) partnership, and Operation Warp Speed. A key feature is a simulation that provides students the opportunity to experience the formation of a PPP using the tools they develop during the semester.

LAW 3067 v00 Public-Private Partnerships: Law and Governance
LL.M Course (cross-listed) | 2 credit hours
Public-Private Partnerships (PPPs) are a modern means for pursuing social and policy outcomes and have recently served as a key vehicle for addressing the COVID-19 pandemic. When they work, they mobilize the comparative advantages of the public and private spheres to address key challenges. When they fail, critics cite their worst aspects and argue for a retreat into more traditional roles. Their prevalence means that everyone is likely to come across, and be affected by, such a partnership at some point in their careers.

In a project-based practicum course, students participate in a weekly seminar and work on a project under the supervision of their professor. This project-based practicum course will focus on the interaction between international human rights law and reproductive health and rights. Students will participate in a two hour/week seminar and carry out 10 hours/week of project work under the direction of the course professor.

SEMINAR: The seminar will begin by providing an overview of international human rights law as it pertains to reproductive rights. The course will then focus on access to reproductive health from an international perspective, examining States’ obligations on a variety of issues, such as maternal mortality and coerced sterilization. Analyzing recent decisions emerging from regional and international human rights bodies, such as the European Court of Human Rights, the Inter-American Commission and Court on Human Rights and the CEDAW Committee (UN Committee on the Convention on the Elimination of All Forms of Discrimination against Women), the seminar component will provide a solid legal foundation for students to develop their experiential/field placement projects.

PROJECT WORK: Students will work with external partners on legal and policy projects related to reproductive health. Some of the projects may include drafting amicus briefs for cases currently pending before international bodies, and drafting briefs assessing a particular State’s compliance with human rights law regarding sexual and reproductive rights to be filed in front of UN bodies (shadow reports). Through these projects, students will learn how to conduct an analysis of existing legal and regulatory frameworks for sexual and reproductive health from a human rights perspective. Students will also learn how to use epidemiological data to support and craft compelling human rights law arguments for advancing public policy on, for example, maternal mortality and sexual violence prevention and eradication. By working with external civil society organizations, the course will give students the opportunity to develop practical projects using international human rights law to advocate for the advancement of reproductive health rights. In the past, external partners have included organizations working on women’s rights issues, such as: the Center for Reproductive Rights, Women’s Link Worldwide, Human Rights Watch (Women’s Rights Division), IPAS, and Southern Africa Litigation Centre, among others.

Prerequisite: J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Mutually Excluded Courses: Students may not concurrently enroll in this practicum course and a clinic or another practicum course. Students may concurrently enroll in this practicum course and an externship.

Note: This practicum course is open to LL.M. students, space permitting. Interested LL.M. students should email the Office of the Registrar (lawreg@georgetown.edu) to request admission.

Evening students who work during the day are encouraged to reach out to the professor to discuss whether this practicum course would be compatible with their schedules. This is a four credit course. Two credits will be awarded for the two-hour weekly seminar and two credits will be awarded for approximately 10 hours of supervised project work per week, for a minimum of 11 weeks. Both the seminar and the project work will be graded. Students who enroll in this course will be automatically enrolled in both the seminar and project components and may not take either component separately. After Add/Drop, a student who wishes
LAW 1445 v00 Reproductive Justice Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW %201445%20v00)
J.D. Seminar | 2-3 credit hours
Reproductive Justice is a concept developed by Black Women activists in the 1990s to provide a different framework to explore how systemic oppression impacts reproductive decision-making. Acknowledging that abortion and contraception were often not the primary reproductive concerns of many marginalized women, including women of color, young women, women with disabilities, undocumented women, and queer women, activists adopted a framework that considers the contexts in which reproductive decisions are made. This approach centers social, racial, and economic justice, and focuses as much on the rights to have and raise children as it does on the right to not have them through access to safe and legal abortion care and contraceptive access.

This course will focus on the rights to not have a child, to have a child, and to raise a child. While abortion will be discussed in several of the units in which it is relevant, due to the truncated semester, the course will not focus on abortion or contraception. Students may, however, focus their writing requirement on abortion or contraception. The course will take an interdisciplinary approach to the issues, incorporating various bodies of law (family law, welfare policy, criminal law) along with an historical analysis, social science, and current events.

Note: NOTE FOR THE SUMMER 2021 SECTION: This professor has committed to teaching this course from the classroom on campus. Students may participate in-person or remotely.

J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. This course will be enrolled via waitlist.

LAW 3090 v00 Reproductive Rights (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW %203090%20v00)
LL.M Course (cross-listed) | 2 credit hours
This course will explore the history and law of reproductive rights in the United States. The majority of the semester will be spent analyzing the constitutional framework, jurisprudence and federal and state regulations governing forced sterilization, contraception and abortion from the 1920s until today. We will consider the historical, social, and religious context of the regulation of reproduction; gender, race and socioeconomic class issues; and the practical impact of the regulations in effect today. This course is primarily focused on reproductive rights in the United States, but we may consider comparative international perspectives.

Please note that this course will not cover regulation of parenting, adoption, foster care, assisted reproductive technologies or related reproductive health topics, or reproductive justice in any meaningful detail.

All students are expected to read the assignments, attend class, and prepare for active discussion every week. Depending on course enrollment, I may assign small groups of students to assist me in leading each week’s discussion of the assigned materials. Short oral presentations on current events or topics of particular interest will likely be assigned during the second half of the semester.

Grading: Class participation, including oral presentations, and/or short reaction papers will represent at least 35% of the final grade. A take-home exam will account for the remaining 65%.

Recommended: Constitutional Law I
The primary objective of the course is to teach students about the regulation of private health insurance at the federal and state level, with the rare opportunity to witness real-time changes to this complex system. Through this course, students will gain a broader understanding of administrative law and how it has affected Affordable Care Act (ACA) implementation. By the end of the course, students will be able to describe how private health insurance is regulated at the federal and state level, the major reforms ushered in by the ACA, federal and state implementation, and likely areas of changes to the law given real-time debates.

The Patient Protection and Affordable Care Act has significantly impacted the health care system. Through changes to the regulation of private health insurance, federal subsidies for low-income people, individual and employer mandates, and expansion of the Medicaid program, millions of Americans have gained health insurance. Yet, the implementation of the law’s most significant reforms has been challenging, and its provisions have been subject to extensive litigation and threats of repeal.

This course will examine the regulation of private health insurance with an emphasis on the issues that the ACA was designed to address. The course will explore regulatory changes such as new market reforms and health insurance marketplaces; the impact of federal and state approaches to implementation; and legal and regulatory challenges. Guest lectures by speakers—including insurance industry representatives, legal experts, and regulators—will provide students with an in-depth understanding of how the ACA has been implemented and what it means for millions of consumers across the country.
LAW 3139 v00 The International Health Law Infrastructure - Building Resilience from the COVID Crisis (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203139%20v00)

LL.M Seminar (cross-listed) | 2 credit hours
This course will provide an overview of the international and domestic legal and policy frameworks relating to Global Health. It will explore the critical tools used by the international community and donor governments to respond to the COVID crisis. Using the International Health Regulations, Sustainable Development Goals 2030, WTO Doha Declaration, COVAX Agreements, and International and Regional Human Rights Treaties we will provide a foundation of policy deployment at the international level. Against this backdrop we will focus on the challenges and the tension of international organizations to operate in crises and the sovereignty of the country members resulting in a hardening of nationalism and making their citizens a top priority. Cross-border challenges and threats had been a concern before COVID-19; climate change, fragility and conflict, migration and infectious disease are all increasing in frequency. We will address and examine how these tensions impacted the COVID crisis and other global health emergencies.

The course is designed to impart practical skills for students interested in exploring careers focused on these international issues/global health in government, nongovernmental organizations or the private sector, providing a complementary perspective to Preventing, Detecting and Responding to Global Health: The International Health Regulations and the U.S. Government Interagency Process from the international perspective.

By the end of this course, students will be able to:

• Identify and interpret the key relevant authorities and limitations that underpin the global response to the COVID crisis and other global health emergencies in the international community.
• Identify and interpret the key regulations, guidance, and other laws applicable to providing COVID response as well as broader global health assistance by the countries at the national level.
• Draw lessons learned from the international and country-level response to the COVID crisis.
• Predict and explain policy decisions based on knowledge of areas of international organization, donor governments and private actors discretion and restrictions.
• Critically analyze the application of the international global health infrastructure, the IHR and Global Health Security Agenda to COVID and other real life scenarios.
• Identify and recommend changes to the international legal framework for global health to respond more efficiently and effectively to the next global health crisis.
• Differentiate between ideals and goals that are achievable under the relevant legal and regulatory frameworks from activities that are restricted, restrained or prohibited.

Recommended: International Law; Administrative Law; Global Health Law Seminar

LAW 3085 v00 The Nuremberg Trials, the Doctors Trials (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%203085%20v00)

LL.M Seminar (cross-listed) | 2 credit hours
The Doctors Trial considered the fate of twenty-three German physicians who either participated in the Nazi program to euthanize persons deemed "unworthy of life" (the mentally ill, mentally retarded, or physically disabled) or who conducted experiments on concentration camp prisoners without consent. The Doctors Trial lasted 140 days. Eighty-five witnesses testified and almost 1,500 documents were introduced. Sixteen of the doctors charged were found guilty. Seven were executed.

The Doctors Trial provides a significant and important example of human rights violations and serves as a lesson in law and bioethics vital to understanding how law evolved from an initial eugenics policy to and including the horrible examples that framed human atrocities during WW II.

This course will highlight examples from Jeanne Guillemin’s "Hidden Atrocites, Japanese Germ Warfare and American Obstruction of Justice at the Tokyo Trial", Joel Dimsdale's "Anatomy of Malice" examining the psychological assessments necessary for the trials, and Vivien Spitz's "Doctors from Hell", delving deep into the actual court transcripts from the proceedings. Ben Ferenz’s work, one of the actual prosecutors at the trials, will also be included as insight into this tragic period.

Note: In the Spring 2022 semester, this course will take place online via Zoom (https://georgetown.box.com/s/s4nyif5n3g92usmagij9guq5n2cjpw7f).
**LAW 869 v00 The Role of WHO in Global Health Law and Governance**

[http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20869%20v00](http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20869%20v00)

**LL.M Course (cross-listed) | 1 credit hour**

WHO is the sole global health organization and, as such, has been traditionally considered the lead actor in this domain at the center and the forefront of technical, policy and normative developments in global health governance. Its Constitution and institutional structure represent both the embodiment of a new way of thinking about global health and its governance at the time of creation of the UN system as well as the outcome of political compromises that have affected the life of the organization and its positioning in the global health landscape. The historical development of WHO’s functions and activities are also an emblematic reflection of the changing role of health in the global economic, political and development agendas and, as such, can shed light on broader issue of international law and relations. WHO’s role and significance as the central actor in global health governance has been the object of contestation and much critical reflection starting in the 1990s culminating with the organization's role in responding to recent health emergencies such as the 2014-2015 Ebola outbreak in West Africa and most importantly the COVID-19 pandemic. At the same time, global health governance has become more complex, fragmented and politicized and the future role of WHO has to be seen in the context of those developments and the search for a coherent global health architecture.

The course will focus on four broad areas covering the most important aspects of WHO as an international organization, an actor in global health governance, and a forum for policy and legal developments: 1) Historical, constitutional and institutional aspects; 2) normative functions, with particular focus on the International Health Regulations, and the role of WHO in the development of international law; 3) directing and coordinating functions, both in terms of how to address the most important health challenges as well as with regard to WHO’s interaction with a number of political and economic regimes; 4) the position of WHO in the current global health landscape, both with regard to the role of other actors as well as to how the organization should look to its own future.

The course will allow students to gain not only an in-depth knowledge and appreciation of WHO from an institutional and structural perspective, but also most importantly to appreciate the main contemporary challenges in global health as well as the role of health in a number of critical policy and normative regimes. The approach of the course will be based on lecturing, class discussions and at least one class exercise. Prof. Burci’s former tenure as the Legal Counsel of WHO and a long-term senior lawyer in the organization will allow him to contribute real-life examples and experiences that will better root the course in the realities of the life of an international organization.

**Note:** This course is part of the following graduate programs:

International Legal Studies LL.M.

**ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS.** Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal. Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.

**LAW 611 v04 World Health Assembly Simulation: Negotiation Regarding Climate Change Impacts on Health**

[http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20611%20v04](http://curriculum.law.georgetown.edu/course-search/?keyword=LAW%20611%20v04)

**J.D. Seminar | 1 credit hour**

This Week One simulation will introduce students to the science and impacts of climate change, including effects on health such as heat stress, vector-borne disease, and food security. It will provide students an opportunity to develop positions, advocate, conduct a simulated negotiation, and receive feedback to improve skills. The negotiations will take place as part of the World Health Organization’s World Health Assembly. Students will represent countries and important civil society institutions in negotiating and crafting an international agreement pertaining to climate change and global health. They will have the opportunity to conduct research for their assigned country or organization, interview experts, develop strategy, negotiate, receive and incorporate feedback, and draft resolutions, treaties, or other legislative language. Our approach will allow students to go through not merely an academic negotiation exercise but to develop language that might be useful in the real-world context of the World Health Assembly.

**Note:** This course is mandatory pass/fail, and does NOT count against the 7-credit pass/fail limit for J.D. students.

This optional, elective course is for first-year J.D. students only, who will enroll via the Live Registration process. ATTENDANCE AT ALL CLASS SESSIONS IS MANDATORY. All enrolled and waitlisted students must be in attendance at the start of the first class session in order to be eligible for a seat in the class and must attend each class session in its entirety. For more information see the Week One website ([https://www.law.georgetown.edu/experiential-learning/simulations/first-year-week-one-simulations](https://www.law.georgetown.edu/experiential-learning/simulations/first-year-week-one-simulations)). Due to the intensive nature of the course, the small-group, team, and individual work that is involved, and the preparation that is necessary to ensure a positive student experience, students who wish to drop the course after they have accepted a seat must drop by Monday, November 28, 2022 at 3:00 p.m. After that point, students must receive permission from both the course professor and Assistant Dean for Experiential Education to drop the course. Permission will only be granted when remaining enrolled in the course would cause significant hardship for the student. Students who are enrolled but do not attend the first class session will be withdrawn from the course.
