ENVIRONMENTAL AND ENERGY LAW LL.M.

To view the Virtual Information Session on the Environmental and Energy Law LL.M, click here (https://georgetown.box.com/s/mtps9tq1kdg9ttu87q99bvxh7bi0h0/).

Our Environmental & Energy Law LL.M. degree gives students the opportunity to gain specialized knowledge and skills to pursue a successful environmental/energy law career.

With over 60 courses in US and international environmental and energy law and closely related disciplines to choose from, students can create their own specialized plan of study suited to their passions and career goals. Curriculum offerings range from survey courses in environmental law and energy law to specialized seminars in environmental justice, water law, wildlife law, food and drug law, energy trading, and the intersection of business, sustainability and human rights. During the first semester, students enroll in a specialized Environmental Lawyering Seminar (https://curriculum.law.georgetown.edu/course-search/?keyword=LAW%202077%20v00). This seminar is designed to facilitate high-level idea exchange, cohort-building among classmates, and the opportunity to engage with our world-renowned faculty in a small setting.

As part of their degree, students are required to complete an externship or practicum course to hone practical legal skills. In Washington, D.C., opportunities for externships abound, from private firms and energy companies to government agencies, NGOs, and international organizations. Structured practicums in natural resources law and international environmental law give students the opportunity to undertake real-world projects under the supervision of a professor. Or students can work on cutting edge climate and energy policy issues with the Georgetown Climate Center (http://www.georgetownclimate.org/).

Georgetown environmental law faculty are leaders in the field. Our professors produce a tremendous volume and diversity of scholarship, draft high impact policy pieces and amicus briefs, and give speeches, presentations, lectures and media interviews on important environmental law topics. Over 20 adjuncts include practitioners working at the Department of Justice, FERC, US Coast Guard, World Bank and IUCN, among others, as well as top NGOs and private firms.

Georgetown Environment and Energy Law LL.M. students are a tight-knit cohort of students from around the world who form a bond that lasts their entire career. Our students are also encouraged to take advantage of the numerous on-campus opportunities to engage with our well-established environmental law community, our environmental law journal (http://www.law.georgetown.edu/academics/law-journals/gelr/), environmental law society, energy law group, panelists representing different careers, and guest speakers who are drawn by Georgetown’s location and reputation each year.

Our deeply knowledgeable graduate-only career services team as well as our extensive network of alumni and adjunct faculty open doors to a plethora of opportunities. Graduates of the Environment and Energy Law LL.M have gone on to successful careers in private law firms in the US and around the world, as well as the US government (e.g. EPA, NOAA, State Department, Interior Department, JAG), other governments around the world, non-government organizations (e.g. ELI, WRI, NRDC), International organizations (e.g. World Bank, IADB) and energy companies (e.g. General Electric, CREIAS Corp).

Public sector lawyers from developing countries can apply for the UNEP-Georgetown Global Environment & Sustainability Law Fellowship (https://www.law.georgetown.edu/admissions-aid/graduate-admissions/scholarships-fellowships/unep-georgetown-law-center-global-environment-sustainability-law-fellowship/), which covers the full cost of tuition and travel for the Georgetown LL.M., and includes a posting at UNEP’s headquarters in Nairobi, Kenya.

Georgetown J.D. candidates can obtain the LL.M. by completing 12 additional credit hours, through a joint J.D./LL.M. in Environmental Law (https://curriculum.law.georgetown.edu/llm/llm-joint-degree-programs/joint-degrees/jd-llm-environmental-law/).

LAW 025 v00 Administrative Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 025 v00)
J.D. Course (cross-listed) | 3 credit hours
This course considers the constitutional, statutory, and other legal limitations on what government agencies can do and how they can do it. What constraints govern the power of agencies to make law, decide cases involving private parties, and investigate citizens? How much "due process" must government agencies give citizens whose lives they affect; what limits has Congress imposed on the procedures for agency decision making; and to what extent can people call on courts to check what they regard as abuses of governmental power? These are among the questions addressed in the course, which draws together problems ranging from the legitimacy of New Deal institutions to the dramatic procedural innovations of recent federal administrations and problems created by renewed Congressional interest in the details of agency decision making.

Recommended: For Professor Nager’s section: Prior or concurrent enrollment in Constitutional Law I: The Federal System.

Mutually Excluded Courses: Students may not receive credit for both this course and the first-year elective by the same name or the first-year course, Government Processes.

LAW 025 v08 Administrative Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 025 v08)
J.D. Course | 3 credit hours
Virtually all areas of law today involve a substantial element of administrative law. This course introduces you to the role of administrative agencies and how law and political factors shape their powers and work. This includes materials on how they are empowered and constrained by the Constitution, Congress, presidents, and the courts. We also study ways in which agencies generate law and develop policies. This class coverage includes, among other topics, materials on citizens’ abilities to petition, shape, and litigate over agency actions; changing views of presidents’ roles and powers over agencies; and statutory factors and doctrine shaping judicial review of agency law interpretation, reasoning, responsiveness, policy shifts, and engagement with science and facts.

Mutually Excluded Courses: Students may not receive credit for both this course and the first-year elective by the same name or the first-year course, Government Processes.

LAW 1905 v00 Advanced Administrative Law Seminar – The Consumer Protection Agencies (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1905 v00)
J.D. Seminar | 2 credit hours
The course’s goal is to familiarize students with the challenges consumer protection agencies face. The course will focus on the Federal Trade Commission, the Consumer Financial Protection Bureau, and the Food and Drug Administration. The course will require significant readings about contemporary policy issues, and those readings will be the launching point for in-class discussions. Many of the readings will come from the Federal Register and the Administrative Conference of the United States; others will critique the work of one or more of the consumer protection agencies. During seminars, students will often engage in role-playing: some students will take on the role of senior agency officials, others will be lawyers for consumer groups that seeks to force the agency to take certain actions (regulatory or enforcement), or lawyers representing a company or trade association opposing regulation or to stave off enforcement actions.

Prerequisite: Administrative Law.
LAW 029 v00 Advanced Environmental Law: Climate Change (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 029 v00) (Project-Based Practicum)

J.D. Practicum (cross-listed) | 4 credit hours
In a project-based practicum course, students participate in a weekly seminar and work on a project under the supervision of their professor. This project-based practicum course will focus on the evolving legal and policy developments concerning global climate change, and provide students the opportunity to engage in hands-on work with policymakers in addressing the issue. Students will participate in a two hour/week seminar and carry out ten hours/week of project work including regularly scheduled meetings with professor and Georgetown Climate Center attorney advisors.

SEMINAR: This seminar covers the current understanding of climate change science and impacts, international and domestic policy approaches, technological and adaptation responses, and legal and regulatory cases and developments. Class participation and attendance will be graded.

PROJECT WORK: Students will prepare papers and make presentations in class and to outside partners on topics being analyzed for state and local governments through the work of the Georgetown Climate Center of Georgetown Law (http://www.georgetownclimate.org/). Students work with the professors and advisors to develop professional-quality work products that can be shared with outside partners. The Center works with states and communities on crafting policy strategies to reduce emissions that contribute to climate change and to adapt to the consequences of climate change.

Prerequisite: Environmental Law. J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Mutually Excluded Courses: Students may not take another practicum course or a clinic at the same time as a project-based practicum course. Students may enroll in an externship at the same time as a project-based practicum course.

Note: This course may be suitable for evening students who can regularly attend class and participate in calls or meetings during the day as students interact with professors, advisors, and/or clients.

This is a four credit course. Two credits will be awarded for the two-hour weekly seminar and two credits for approximately ten hours of project work per week, for a minimum of 11 weeks. Both the seminar portion and the project work will be graded. Students who enroll in this course will be automatically enrolled in both the seminar and project components and may not take either component separately. After Add/Drop, a student who wishes to withdraw from a practicum course must obtain permission from the faculty member and the Assistant Dean for Experiential Education. The Assistant Dean will grant such withdrawal requests only when remaining enrolled in the practicum would cause significant hardship for the student. A student who is granted permission to withdraw will be withdrawn from both the seminar and project components. Regular and punctual attendance is required at all practicum seminars and students are required to devote the requisite number of hours to their project. If a student must miss seminar, project work, a meeting or a deliverable, he or she must speak to the professor as soon as possible (ideally beforehand) to discuss the absence or missed assignment. Unless the professor indicates otherwise, a student with more than one unexcused absence from the practicum seminar (out of 13 total seminar sessions), or one week of unexcused absences from the fieldwork or project work (out of a total of 11 weeks of fieldwork or project work), may receive a lower grade or, at the professor's discretion, may be withdrawn from the practicum course. In practicum courses,

LAW 3151 v00 Advanced National Security Law and the Sea (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3151 v00)
LL.M Seminar (cross-listed) | 2 credit hours
This course will examine how sovereign States apply the law of sea, other international and domestic laws, and oceans policy to issues affecting national security. Foundational provisions of the 1982 UN Convention on the Law of the Sea, to include baselines, maritime zones, transit regimes, flag and port State control of activities aboard ships, marine environmental protection and access to seaborne resources, and military uses of the sea, will be explored through case studies and hypotheticals. Students will examine the various mechanisms States have implemented to avoid dangerous incidents at sea, seek peaceful resolutions to maritime disputes, and combat illegal seaborne activities. From Great Power Competition to Pacific Island Nation food security, from countering nuclear proliferation to humanitarian assistance/disaster relief, students will explore how the law of the sea is both shaped by and shapes States’ responses to national security challenges.

Learning Objectives:

Students will:

• Exhibit an understanding of the history, foundational provisions, and differing interpretations of the 1982 UN Convention on the Law of the Sea.
• Gain an understanding of how law of the sea and oceans policy interrelates with current national security issues.
• Develop the skill to apply the law of the sea, other international and domestic laws, and oceans policy to national security challenges and effectively communicate opinions and analysis to senior national security leaders.
This course is only open to J.D. students.

LAW 127 v00 Advocacy Tools for Public Interest Lawyers (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 127 v00)
J.D. Seminar (cross-listed) | 2 credit hours
This course is designed for students embarking on careers in public interest law or policy and explores the many necessary techniques to become highly effective advocates for social change. The purpose of the class is to help class participants develop creative advocacy approaches and learn to think beyond litigation and other traditional legal strategies to meet key client and societal goals. In particular, the course will: 1) explore how coalition building, grassroots organizing, and public policy advocacy can be used to enhance legal strategies; 2) teach basic public interest advocacy skills, including media relations, fundraising basics, legislative advocacy and lobbying, leveraging data and research, social marketing and public opinion, and cutting-edge digital strategies; and 3) introduce students to dynamic experts in relevant issue areas, from lobbyists to communications experts. Using compelling case studies and background reading materials, students will have the opportunity to use multiple advocacy tools to tackle real-life social problems on the local and national levels. Grades will be based on the extent and quality of class participation and written assignments.

Note: FIRST CLASS ATTENDANCE IS MANDATORY. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist.

This course is only open to J.D. students.

LAW 567 v00 Animal Protection Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 567 v00)
(Fieldwork Practicum)
J.D. Practicum | 4 credit hours
In fieldwork practicum courses, students participate in weekly seminars and conduct related fieldwork at outside organizations. This fieldwork practicum course explores the process of public interest litigation in an effort to better understand the status and treatment of animals in the courts. Students will participate in a two/hour/week seminar and also undertake 10 hours/week of fieldwork in the twenty-attorney legal team at the Humane Society of the United States.

SEMINAR: The seminar offers a practical survey of litigation and legislative efforts on behalf of animals at the local, state, and national level. The course will address the historical status of animals in the law; the current application of animal protection laws to wild animals, animals confined in factory farms, exhibitions, and laboratories, and companion animals; legislative efforts and citizen initiatives to strengthen animal protection laws; the role of international conventions and other laws concerning trade in animals and animal products; the limitations on implementation and enforcement of animal laws; and the impacts of free speech, religious expression, and other constitutional provisions on animal protection laws. Utilizing an interdisciplinary approach that combines administrative law, environmental law, consumer protection, and other related public interest fields, the seminar will examine why some public interest litigation campaigns succeed and others fail, explore how to construct an effective public interest litigation strategy, and teach students how to develop innovative uses of existing laws to expand legal protections for animals.

FIELDWORK: Students will work closely with the Humane Society of the United States’ in-house legal team to find new and creative ways to ensure that all animals receive the legal protections they deserve. As part of the fieldwork, students will work on a wide variety of cases, petitions, and proposed legislation in state and federal courts, agencies and legislatures throughout the country, including actions to protect endangered species and other wildlife, to curb unscrupulous breeding of and cruelty to companion animals, to improve the treatment of animals used in research, and to prevent the systematic mistreatment of animals in industrial farms. The docket is extensive and interdisciplinary, and involves cases being pursued jointly with other public interest groups, including environmental protection, consumer protection, public health, labor, and sustainable agriculture organizations.

Prerequisite: J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Recommended: Administrative Law.

Mutually Excluded Courses: Students may not concurrently enroll in this practicum and an externship or a clinic or another practicum course.

Note: This practicum course is open to LL.M. students, space permitting. Interested LL.M. students should email the Office of the Registrar (lawreg@georgetown.edu) to request admission.

This course is suitable for evening students who can attend the weekly seminar and conduct 10 hours of fieldwork/week during normal business hours. This is a four credit course. Two credits will be awarded for the two-hour weekly seminar and two credits for approximately 10 hours of fieldwork per week, for a minimum of 11 weeks, to be scheduled with the faculty. The fieldwork must be completed during normal business hours. The two-credit seminar portion of this practicum will be graded. The two credits of fieldwork are mandatory pass/fail. Students will be allowed to take another course pass/fail in the same semester as this practicum. Students who enroll in this course will be automatically
LAW 370 v02 Business and Human Rights in the Global Economy (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 370 v02)  
J.D. Seminar (cross-listed) | 2 credit hours  
Corporations today have a global scale as well as an impact that matches or sometimes exceeds that of governments. Their activities -- from sourcing of raw materials, to processing and production of intermediate or finished goods, to distribution and sale -- have major consequences not only for the human rights of their employees but also for the rights of the individuals and communities impacted by their operations. In many countries, government regulation and oversight are either absent or largely ineffective. Companies in turn struggle to define their responsibilities in the face of these "governance gaps" -- particularly where requirements under national law fall short of international standards in areas such as hours of work and safety and health.

A robust and often contentious debate over these issues culminated in the development of the U.N. Guiding Principles on Business and Human Rights (the "UNGPs") under the leadership of Special Representative John Ruggie. These Principles establish a framework for considering the respective roles of governments and corporations and outline core concepts of human rights due diligence and effective remedy. In doing so, the UNGPs also inform and to some extent refocus efforts that have emerged over the past 20 years to address these governance gaps and have brought together stakeholders from business, labor, civil society, the investment community, and academia.

At the same time, in recent years there has been an increased push from civil society groups and certain governments to go beyond these "voluntary" efforts and develop a binding business and human rights treaty mechanism; this has met with strong opposition from business and many other governments, including the United States.

Even as "non-regulatory" approaches remain the predominant means of addressing various business and human rights challenges, there also has been a growing focus in recent years on tools through which national governments and international institutions could exercise greater leverage. This includes advocacy for stronger labor and other human rights language in trade agreements, one-way trade preference programs, procurement standards, and the rules and guidelines applied by international financial institutions -- coupled with more aggressive enforcement of those criteria. Expanded efforts to advance that "regulatory" approach in trade policy and elsewhere in some cases has been met with resistance from governments and business, but there also have been examples of emerging consensus among a diverse range of stakeholders.

This course introduces students to this quickly-evolving business and human rights landscape, including the diverse set of multi-stakeholder initiatives -- some, but not all, of which include government participation. We will discuss the guidance provided by the UNGPs and other instruments, the range of stakeholders and how they engage with one another, tools utilized by governments and corporations to implement human rights standards, and how all of these interact in the context of both sector-specific and cross-cutting legal and policy challenges.

Among the questions the course will examine are:

- Which human rights standards are most relevant to business?
- What are the appropriate linkages between business policies and practices and the promotion of human rights?
- Which business and human rights approaches are emerging as "best practices" and perhaps even as recognized norms?
- What tools to support those are being used by governments and corporations?
- Who are the principal stakeholders and what are their roles and objectives?
- How does the role of business change in the relationship with governments and society?
- What is the role of the law in addressing business and human rights challenges, including the negotiation, interpretation, implementation, and impact of the UNGPs?
- How can corporations effectively integrate human rights considerations into decision-making processes, business strategy, and risk management?
- What tools and techniques are available for addressing grievances and compensation?
- What is the role of civil society in engaging with corporations on human rights issues?
- What is the role of the rule of law in addressing business and human rights challenges?
- What role does the United Nations and other international organizations play in addressing business and human rights challenges?
- What role do businesses, governments, and civil society play in advocating for and implementing human rights standards?
- What is the role of the law in addressing business and human rights challenges, including the negotiation, interpretation, implementation, and impact of the UNGPs?
- How can corporations effectively integrate human rights considerations into decision-making processes, business strategy, and risk management?
- What tools and techniques are available for addressing grievances and compensation?
- What role does the rule of law in addressing business and human rights challenges?
- What role do businesses, governments, and civil society play in advocating for and implementing human rights standards?
- What is the role of the United Nations and other international organizations play in addressing business and human rights challenges?

LAW 3060 v00 Business, Human Rights and Sustainability (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3060 v00)  
LL.M Course (cross-listed) | 1 credit hour  
The relationship between business, human rights, and sustainability has gained momentum in recent years with the private sector, governments, civil society, and international organizations, owing largely to the passage of the United Nations Guiding Principles on Business and Human Rights (UNGPs) in 2011, the 2012 UN Rio + 20 Sustainable Development Conference and the UN Sustainable Development Goals (2015). These developments were preceded and followed by a series of multi-stakeholder (governments, private sector, investors, civil society networks and organizations) and specific industry driven initiatives looking at how to integrate these international standards into both self and binding regulatory processes. As a result, many of these initiatives led to an emerging international soft law system of business, human rights and sustainability that is based in the internationally acknowledged body of hard law principles.

Regardless of being industry, sector specific or multi stakeholder in nature, the regulation, de-regulation, policy, practice and ever growing global litigation in this new field of practice is multifaceted, dynamic, interactive, complex and challenges business leaders, markets and even lawyers to think outside the box in order to address a challenging relationship between business, markets and society. This is where business strategy meets risks. Or instead, this is where risks eat a business strategy. As a result, business leaders, shareholders and their advisors are now required to integrate a 3D internal and external view and assessment on how to address, prevent, mitigate and remediate the social and environmental impacts (risks) of private sector operations in complex environments and with a collaborative and systems thinking approach.

Bar Associations in America and abroad have begun issuing specific guidance on how corporate lawyers should advise their clients incorporating human rights and sustainability standards. For instance, in a Mergers and Acquisitions (M&A) transaction, corporate lawyers are most likely to encounter questions dealing with social, environmental, human rights and environmental concerns. Those advocating on behalf of environmental and human rights organizations will find their work directly intersects with company law, securities law, investment law, governance, compliance, company law and alternative dispute resolution mechanisms to name a few sub areas.

Fast-forward 2020. The global COVID-19 pandemic has suddenly entered this space. It has done so highlighting the vulnerabilities and opportunities in the relationship between business, governments and society across the globe. Furthermore, the global pandemic is challenging all stakeholders not only to become relevant but to re-think, re-imagine and re-envision new models that seek engagement, resilience, addressing grievances, investment, economic recovery and accountability frameworks.

In practice, these global and ever growing litigation trends are also challenging traditional company-led corporate social responsibility (CSR) and ethics programs that have been associated with both philanthropic, corporate citizenship and company-sponsored activities that give back to societies. While many of these programs have achieved several levels of success, for many sectors in society they remain as corporate public relations or green wash exercises and demand more transparent, accountable and remediation responses. The stakes are high.

Litigation, a growing movement towards mandatory human rights and environmental due diligence and reporting requirements and other types of social demands are challenging companies to be very purposeful and accountable on how they address the environmental, social and governance negative impacts (for some) or violations (for others) of their operations, and the potential costs to the company. This examination must necessarily include findings in litigation in recent years, such as the UNGPs and their impacts on the business practices of companies around the world, and the role of the law in addressing these challenges.
LAW 1884 v00 Constitutional Aspects of Environmental Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1884 v00)
J.D. Seminar (cross-listed) | 2 credit hours
Since the 1970s, environmental law has provided an important context for the development of constitutional doctrines. These developments have accelerated in recent years as environmental issues have risen to the forefront of the political debate and received increased attention from parties across the political spectrum. This course focuses on recent jurisprudence, and current developments in environmental law that relate to constitutional issues. To that end, students will examine recent agency rules, appellate briefs, and court decisions. At the outset we will discuss constitutional limits on Congress’s power to enact statutes addressing environmental harm. We will then turn to how courts interpret Congressional delegations of authority to administrative agencies including separation of powers issues. Finally, we will address constitutional limits on judicial review. The course will also include conversations with guest speakers from the federal government, state government, and private sector who have worked directly on developing the challenged actions and litigating the cases we will discuss.

The course materials will include agency regulations and guidance documents, excerpts of merits briefs and oral argument transcripts, as well as published opinions.

LAW 1747 v00 Corporate Purpose and Environmental, Social and Governance (ESG) Issues Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1747 v00)
J.D. Seminar (cross-listed) | 2-3 credit hours
In a seminal 1970 essay, economist Milton Friedman famously wrote that a corporate executive’s responsibilities are solely to the company’s stockholders and that the stockholders’ desires are for the corporation “to make as much money as possible.” Many credit this essay with inspiring a widely held notion that a corporation’s purpose is to make money for its stockholders without considering the interests of the greater society. Others, including some investors, have argued that corporations should be evaluated on issues beyond their financial performance, and in recent years many of these issues have been grouped under the acronym “ESG,” standing for a corporation’s environmental, social and governance practices. Conditions and events such as climate change, the pandemic, the BLM movement, voting legislation and growing economic inequality have heightened ESG awareness. Notable business groups, academics and others have explicitly or implicitly rejected the Friedman position and have argued that corporations have significant ESG-related obligations.

This seminar will consider issues related to the purpose of a corporation and its obligations to its stockholders and the larger group of stakeholders, the fiduciary duties of corporate directors in the context of ESG, agency issues associated with differing interests of stockholders and management, the role of the SEC and other regulators in corporate ESG matters, considerations of investors focused on ESG issues and their ability to influence corporate ESG actions, reporting of ESG-related information by companies and ratings of companies on the basis of that information and the impact of ESG considerations on corporate performance and profitability. We will also consider particular ESG issues and how corporations have addressed them. There is no textbook for the seminar. Readings will include legal, academic and general articles and materials on the subjects being covered.

Course Goals/Student Learning Outcomes:
The primary objectives of this course are for students to develop an understanding of the often-conflicting considerations that affect a corporation’s handling of ESG issues and the perspectives of investors who make investment decisions on the basis of ESG considerations. This will include an understanding of state corporate law fiduciary considerations, the application of federal securities, labor, banking and other laws to ESG activities and the impact of corporate governance principles. Students completing the course should be in a position to advise clients and colleagues on these considerations.

Mutually Excluded Courses: Students may not receive credit for this course and Sustainability for Big Law and Big Business.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.
Decarbonizing the Energy Sphere: A Federal Regulatory Approach

LAW 1551 v00 Decarbonizing the Energy Sphere: A Federal Regulatory Approach (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1551 v00)

J.D. Seminar (cross-listed) | 2 credit hours

Burgeoning climate concerns, abetted by technological advances, have prompted new federal regulatory strategies to reduce carbon emissions in the energy sphere. Relying mostly on precedents less than four years old, this course will explore environmental policy involving wholesale energy sales, transmission of electricity, and transportation of natural gas. We will apply the legal framework of statutes organic to the Federal Energy Regulatory Commission as a starting point to examine incentives and impediments to new wind and solar generation and strategies such as carbon pricing. The operation and continuing relevance of the Public Utility Regulatory Policy Act in competitive wholesale markets will also be examined. The course will further address how seemingly local concerns, such as rooftop solar, may implicate federal energy regulation and policy interests. Turning to pipelines, we will examine how National Environmental Policy Act, Clean Air Act, and Clean Water Act requirements affect authorization of new construction, applied concepts of environmental justice, law and policy regarding export of liquefied natural gas, and potential remedies for pipeline construction subsequently found to have been unlawfully authorized, among other topics.

Decarbonizing the Energy Sphere: A Federal Regulatory Approach will provide students the foundation to critically assess the balance of environmental values and ubiquitous consumer demands, such as reliability and affordability. Case readings will be paired with a policy text to undergird discussions of means within the broader investment and technological context to achieve environmental objectives. Our examination of policy options will be informed by consideration of a broad array of stakeholder interests. By gaining exposure to major environmental controversies in federal energy regulation, students will gain deep practical knowledge and develop insights into the formulation of decarbonization strategies.

To provide opportunities to apply course concepts and materials, students will participate during class time, and with ample advance notice, in oral argument and judging. By creating an outline in support of scenario-based legal positions and arguing for them in a supportive environment and reaching a determination in the context of a well-defined legal controversy, students will gain experience in the advocacy and evaluation of complex, contemporary legal issues where federal energy and environmental law intersect.

Recommended: Administrative Law.

Derivatives Regulation

LAW 969 v00 Derivatives Regulation (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 969 v00)

LL.M Seminar (cross-listed) | 2 credit hours

Derivatives, including virtual currencies, are a large, dynamic and rapidly evolving part of the world’s financial markets. The size and importance of these markets alone would make derivatives regulation a worthy part of law school study, particularly for those interested in financial markets. Add to that a significant change in the regulatory framework on a scale unseen since the 1930’s and it is clear that there has never been a better time to study the legal issues and operational challenges for market participants. This course will focus on the regulation of derivatives under the Commodity Exchange Act, as amended by Dodd-Frank, and as implemented by the Commodity Futures Trading Commission. This course is designed as a “Derivatives 101” equivalent, providing a broad overview of the regulation of derivatives. No prior knowledge of derivatives is required to succeed in this course. The course will include an in-depth look at the new regulatory requirements and issues with respect to (i) market transparency and integrity, such as preventing market manipulation, disruptive trading practices, and so-called excessive speculation; (ii) the increasing use of automated trading systems and high-frequency trading in commodity markets; and (iii) the interplay between Congress, the federal market regulators, and the entities subject to financial market regulation. Students will be presented with the same questions of law confronting attorneys advising entities trading in derivatives markets, regulators, and the courts.
Environmental and Energy Law LL.M.

LAW 847 v00 Developing & Financing Infrastructure Projects (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 847 v00)
LL.M Course (cross-listed) | 3 credit hours
This course will use recent transactions involving infrastructure projects (domestic and international) to illustrate the legal techniques and financial issues involved in project development and financing. The course will address case studies involving energy projects, telecom, toll roads, mining, ports, airports, other infrastructure and professional sports facilities. Class discussion will include analysis of how project risk analysis is done and review of key documents used to develop, construct and finance projects. Students will participate in simulated contract negotiation and drafting exercises representing designated parties to a transaction. Coverage will include different sources of financing, including banks, capital markets, ECAs and multinational entities. There will be both a final examination (open-book) and a short drafting exercise that will be graded. Class on 11/2 will be a Special Negotiation Workshop, for which the class will be divided into groups to negotiate a financing term sheet for a model transaction.

The required course textbook is:

Additional case studies, such as Henry A. Davis, ed., Project Finance: Practical Case Studies, Second Edition (two volume set: Volume I – Water and Power, and Volume II – Resources and Infrastructure), and other materials not in the above publication will be provided.

Learning objectives:
The course is based on four major themes and aims to teach students to analyze issues in light of each theme: (i) allocation of risk, (ii) non-recourse or limited recourse arrangements, (iii) effective contract structures, and (iv) financeability. The class will focus on both theory (risk analysis and mitigation) and practice (critiquing and drafting agreements). Both the written assignment and the workshop will focus on practical matters relating to practice issues.

Mutually Excluded Courses: Students may not receive credit for both this course and Domestic and International Project Finance & Development: Case Studies; or the J.D. course, International Project Finance; or International Project Finance and Investment and Project Development and Finance.

Note: This course is part of the following graduate programs:
Environmental and Energy Law LL.M.

Students may not withdraw from this class after the add/drop period ends without the permission of the professor. NOTE: ATTENDANCE IS MANDATORY at the Special Negotiation Workshop which may be offsite. Failure to attend the Special Negotiation workshop may result in a withdrawal. The Special Negotiation Workshop will be held at Haynes Boone, 800 17th St NW. The specific room and instructions for admission will be provided by the professor.

LAW 1860 v00 Energy Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1860 v00)
J.D. Course (cross-listed) | 3 credit hours
This course covers the foundational legal and policy frameworks for energy systems in the United States, including: the management, development, transportation, and use of energy resources; the generation and transmission of electricity; and the future of energy systems. Throughout the course, students will engage with enduring themes of energy law: markets v. regulation; governance choices (including federalism); and the law's approach to climate change and social justice with respect to energy resources. The professor will use a traditional textbook as well as contemporary case studies to offer students opportunities to test and apply their knowledge throughout the course.

Learning Objectives:
• Upon the conclusion of the course, students will be able to comprehend, apply, analyze, and synthesize key energy-related statutes and regulations administered by the Federal Energy Regulatory Commission, the Nuclear Regulatory Commission, the Environmental Protection Agency, and the Department of Energy, as well as typical frameworks administered by state public utility commissions and other state energy agencies.
• Students will also be able to engage the core themes of energy law to analyze and critique existing legal regimes and new policy proposals.

Mutually Excluded Courses: Students may not receive credit for this course and Energy Law and Policy.
LAW 1472 v00 Energy Law and Policy (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1472 v00)
J.D. Seminar (cross-listed) | 2 credit hours
This course will present the framework for the governance of energy production, distribution and use in the United States, and provide a foundation for future coursework on these subjects. While the course will focus primarily on U.S. law, it will address some international subjects and examples. Topics will include the evolving U.S. fuel mix and market dynamics, utility restructuring and grid modernization, roles of state and federal governments, the role of different policymakers and regulatory bodies in overseeing U.S. energy systems, relevant environmental laws, and emerging policy issues. There are no prerequisites, although experience with administrative law or environmental law would be beneficial.

Learning Objectives:

1. Substantive expertise
   - The physical nature of the energy system (how it is produced, distributed, and used)
   - Common terminology and acronyms related to energy and its regulation
   - Key statutes and regulations applying to energy production, distribution and use, and key cases interpreting this legal framework
   - Current issues being debated in energy law
2. Understanding of governance structure
   - The roles and responsibilities of different policymakers and regulators (e.g., economic regulators, environmental regulators, natural resource managers, legislators) and how they relate to each other
   - State and federal responsibilities in overseeing the energy system
3. Legal and policy skills
   - How to explore questions of regulatory authority by state and federal agencies
   - How to write analytically about legal and policy questions

Recommended: Administrative Law, Environmental Law.

Mutually Excluded Courses: Students may not receive credit for this course and Energy Law.

LL.M Seminar (cross-listed) | 2 credit hours
Energy markets are transitioning rapidly toward a lower carbon future in response to federal and state initiatives and the sentiments of activists, consumers and investors. This transition is creating business opportunities and legal challenges not only for new entrants, such as the providers of renewable energy, energy storage and distributed energy resources, but also for incumbent market participants, such as utilities, pipelines, natural gas producers, independent power producers and large energy consumers. The course will focus on the economic regulation of physical energy markets by the Federal Energy Regulatory Commission (FERC), along with the interplay involving the Congress, federal and state regulators, market participants and other stakeholders. We will examine five main areas: (i) the foundational laws (the Federal Power Act and Natural Gas Act) and legal doctrines governing FERC’s regulation of physical energy markets and the non-discriminatory transmission of electricity and natural gas by wire and pipe; (ii) the impact of restructuring wholesale electric power and natural gas markets pursuant to those laws; (iii) energy market enforcement and compliance policies, derived in large part from securities market regulation; (iv) what generation, transmission and pipeline infrastructure will be needed to ensure reliability and resilience as we transition to a lower carbon future; and (v) “hot topics” such as carbon pricing in organized wholesale electricity markets, the shale gas revolution, federal-state conflicts, pipeline and electric transmission infrastructure development and cost allocation, and integrating distributed resources and renewables. Students will gain an appreciation for the legal and market challenges confronted by market participants during this transition. One or more sessions will feature guest lecturers. There will be no final examination. Instead, each student’s grade will be based on a final paper that takes a position on a key legal or policy issue and defends that position persuasively, several short quizzes during the semester, and class participation.

LAW 142 v02 Energy Problems Seminar: Climate Change and Other Energy Issues (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 142 v02)
J.D. Seminar (cross-listed) | 2-3 credit hours
This seminar considers economic, political, and legal aspects of current problems in the petroleum, natural gas, electrical, nuclear, coal and alternative energy industries with particular focus on global warming and the impact of climate change policies on energy use in the United States and abroad. In addition to the connection between global warming and energy, the seminar will examine: (1) the nexus between U.S. energy policy and Middle East wars and diplomacy; (2) the future of energy deregulation; (3) tensions between state and federal efforts to address energy issues; and (4) the problems and prospects of introducing new fuels and fuel sources, including nuclear, hydrogen, and renewables, into the U.S. and world economies. As these subjects sweep across the entire economy, they touch upon several fields of law: administrative law, antitrust, constitutional law, environmental law, oil and gas law, public utility regulation, and international law (both public and private).

Note: This seminar requires a paper. Students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the Upperclass Legal Writing Requirement. The 3 credit section is open to J.D. students only and non-degree students may not enroll.
LAW 1702 v00 Environmental Advocacy Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1702 v00)
J.D. Seminar (cross-listed) | 3 credit hours
In a warming world, environmental advocacy is more important than ever. This course explores an array of discourses – from art, literature, religion, and psychology, to science, economics, and law – and an array of strategies – from direct action, to community building, to lawsuits – environmental advocates might embrace in pursuing their cause. We will explore the potential contributions of non-legal environmental discourses and strategies to legal argument, and the potential contributions of law to these discourses and strategies. One basic aim of the course is for you to see the possibility that progress on environmental protection might come through discourses other than law and through strategies other than lawsuits, while also appreciating the profound role law plays in shaping the environment we have today. Another is to help you think about what kind of advocate you hope to be.

Recommended: Recommended but not required: Prior or concurrent enrollment in environmental law, natural resources law, or international environmental law.

LAW 1855 v00 Environmental Justice Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1855 v00)
J.D. Seminar (cross-listed) | 2-3 credit hours
This discussion seminar will explore topics in environmental justice from a range of perspectives, including historical accounts of the environmental justice movement, contemporary proposals as to how to respond to unfolding ecological crises, relevant case law and litigation, proposed legislation, domestic and international advocacy efforts, as well as imaginative literature and creative nonfiction. Our goals will be to arrive at a deeper understanding of pressing environmental problems, and, most important, to generate an array of compelling answers to the question, “what is to be done?”

We will begin by exploring accounts of our current environmental crises, their causes and impending consequences, and studying the beginnings of the environmental justice movement, which has sought for several decades to confront the racial and economic inequity of ecological harm. Our second meeting will explore several compelling contemporary proposals to address our current circumstances, ranging from domestic legislation and international diplomacy to organizing for a Global Green New Deal. In our third meeting we will focus on obstacles that impede meaningful change, both economic and political frameworks as well as legal efforts to preserve the status quo. Next, we will turn to creative nonfiction that explores various ways to think and work against these barriers towards a more sustainable and just future. Our fifth meeting will consider imaginative literature and art addressing the climate crisis to further expand our own imaginative horizons. Following our efforts to understand the potential and limits of past efforts to realize greater environmental justice, our sixth meeting will examine recent work addressing future possibilities for social movement advocacy, domestic and international organizing, litigation and legislation, and pushing for more fundamental changes to structures of collective governance and social life. In this penultimate week, we will read work associated with ecofeminist movements, indigenous environmental justice formations, the Black Hive of the Movement for Black Lives, the Sunrise Movement and other contemporary movement formations. In our final meeting, each seminar participant will share with the group a brief account of one additional idea and course of action they believe to offer an especially powerful response to our shared question, “what is to be done, now?”

Note: FIRST AND SECOND CLASS ATTENDANCE IS MANDATORY. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal.

This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.
LAW 1274 v02 Environmental Justice: Law, Policy & Regulation (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1274 v02)
J.D. Seminar (cross-listed) | 2 credit hours
This course will introduce the concept of Environmental Justice in a variety of contexts, along with the specific legal challenges and remedies that arise from constitutional rights, statutory requirements, or executive actions. It will explore the frameworks that inform the analysis of environmental justice issues, including how an environmental justice lens can be applied to a wide range of areas to ensure access and equity focus efforts to resolve these complex issues.

Learning Objectives:

The primary learning objective for this course is to introduce to students how to incorporate environmental justice principles into their perspective and analyses of legal and policy issues. The course will seek to accomplish this through developing the following skills/competencies: (1) developing frameworks for answering fundamental environmental law questions and how environmental justice law can be used to enhance problem-solving to answer those questions; (2) identifying and applying existing laws and remedies to resolve environmental justice issues; and (3) developing creative environmental legal problem solving that addresses inadequacies of current law and its enforcement.

Recommended: Environmental Law.

LAW 146 v01 Environmental Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 146 v01)
J.D. Course (cross-listed) | 3 credit hours
This course covers the key laws developed to control pollution. The main focus of the course is on current statutes, including the National Environmental Policy Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Superfund Act (CERCLA and SARA), and the Clean Air Act. Other statutes, such as the Oil Pollution Act, as well as climate change, are addressed briefly. Common law and pre-1970s efforts to develop law to obtain control are also reviewed. Relying on their practical experience, the instructors address application and interpretation of the statutes, Congressional actions to extend and modify the statutes, regulatory implementation of the statutes by executive agencies, enforcement policy and practice, the role of states, citizens' groups and industry, and private efforts at clean-up. The professors use problems to help students understand the practical application of the statutes in real-world contexts.

Strongly Recommended: Prior or concurrent enrollment in Administrative Law.

LAW 146 v08 Environmental Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 146 v08)
J.D. Course (cross-listed) | 3 credit hours
This course focuses on legal strategies to regulate and remedy environmental harms. The course is designed to prepare transactional lawyers, regulatory lawyers, government counsel and litigators, as well as students interested in specializing in environmental law. A major goal of the course is to introduce students to the analytical skills necessary to understand and work in this and other predominantly statutory and regulatory fields. The course starts by reviewing economic, ecological and historical perspectives on protection of the environment. We also briefly cover common law environmental claims. We then turn to several cross-cutting public environmental law issues, namely discussion of regulatory design choices, federalism issues, a brief introduction to important administrative law concepts, cases, and doctrine, and analysis of the role of citizens as enforcers under US environmental laws. We then turn to in-depth analysis of key portions of several of the most significant federal environmental laws, including hazardous waste cleanup laws, the National Environmental Policy Act (NEPA), the Endangered Species Act, the Clean Air Act, and the Clean Water Act. We will also look at the developing body of law regarding climate change.

LAW 146 v10 Environmental Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 146 v10)
J.D. Course (cross-listed) | 3 credit hours
Between New Year’s Day in 1970 and December of 1980, Congress enacted most of our major federal environmental statutes. To this day, these laws, as amended, form the core of this country’s approach to addressing environmental problems. All of the laws aim to achieve cleaner water, air, and land, while at the same time taking very different approaches to doing so. This course will introduce you to the major federal statutes on environmental protection, including but not limited to the Clean Air Act, the Clean Water Act, and the Superfund law. You will come to understand the basic regulatory goals and mechanisms of these laws. You will also learn how one might choose among these goals and mechanisms in fashioning environmental policy. Ideally, you will come away with an informed judgment about how far we have come in protecting the environment and how far we still have to go.

Recommended: Administrative Law or a first-year elective on legislation and/or regulation.
LAW 2077 v00 Environmental Lawyering (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 2077 v00)

LL.M Seminar | 1 credit hour
This course will explore the many aspects of practicing environmental law – across media (water, land, air, and the energy sector), across levels of government (local, state, federal, international), and across scales (local land use to global climate change). It will also expose students in our specialized Environmental and Energy LL.M. to many aspects of legal practice. For example, students will be introduced to litigation, client counseling, advocacy, rule-making and policy-making for environmental and energy attorneys. Throughout the semester, students will be introduced to several members of the Georgetown environmental law faculty and leading practitioners and will form a community among students in our Environmental & Energy Law LL.M. degree program. The course is organized as a seminar in which students are expected to write reflective essays informed by our readings and to participate actively in discussions. The grade will be based on class participation and reflective memos. The course meets every two weeks over lunch throughout the fall semester.

Note: This course is required for the Environmental & Energy Law LL.M. program and is restricted to LL.M. students admitted to that program.

ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety will result in a withdrawal.

LAW 156 v01 Environmental Research Workshop (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 156 v01)
J.D. Seminar (cross-listed) | 2-3 credit hours
Students in this class will have an opportunity to study, comment on, and develop scholarship of their own regarding environmental law and policy. The class will include introductory materials and discussion about attributes and methods of environmental scholarship. Then the workshop will introduce you to some of the best academic scholars in environmental law who will present a work-in-progress. In both advance written comments and through workshop discussion, students will engage presenting scholars regarding their scholarship. Depending on the presenters’ paper subjects and others’ availability, the workshop might also include a few classes with responsive comments from an outside visitor from government, not-for-profits, law firms, businesses, or legal academe.

Students can fulfill their Georgetown Law upper level writing requirement with an opportunity to produce substantial, publishable legal scholarship on a topic related to environmental, energy, or natural resource law, broadly defined, and receive three credits for their efforts. All students will provide all speakers and the professor with at least brief (no more than one page) of advance comments and questions. Two credit students will provide more in-depth comments to three speakers and the professor, with such comments expected to be five pages in length and reflect careful reading of both the paper and, as necessary to provide knowledgeable comments, draw on selective delving into other scholarly or primary materials relevant to, or referenced in, the presented paper. Our last session together will include a bit of debriefing, but will mainly be a session for three credit students to present their drafts and receive comments.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.

LAW 178 v02 Federal Courts and the Federal System (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 178 v02)
J.D. Course (cross-listed) | 3-4 credit hours
This course addresses the role of the federal courts in our system of government, focusing on relevant constitutional and statutory provisions and jurisdictional doctrines and concepts. Representative topics include justiciability, congressional power to regulate the jurisdiction of the Supreme Court and lower federal courts, Supreme Court review of state court judgments, sovereign immunity, abstention, and habeas corpus.

LAW 178 v03 Federal Courts and the Federal System (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 178 v03)
J.D. Course | 4 credit hours
This course addresses the constitutional and statutory provisions, as well as the jurisdictional doctrines and concepts, that shape and limit the role played by the federal courts in our governmental system. Representative topics include Congressional power to curtail federal jurisdiction, limitations on the ability of the federal courts to enjoin state court proceedings, federal common law, the Eleventh Amendment/state sovereign immunity, federal habeas corpus, and the prerequisites for Supreme Court review of state court judgments. The primary emphasis of the course is on a critical analysis of these jurisdictional doctrines, although some time is spent on litigation aspects.
their authority through rulemaking, guidance and enforcement activity.

This course will introduce students to the foundational laws and policies governing the production and distribution of foods, drugs and medical devices in the United States, focusing on the Federal Food, Drug, and Cosmetic Act (the "Act") and the role of the Food and Drug Administration in enforcing the Act. The course will cover key concepts and definitions – e.g., "food," "drug," "labeling" – and federal statutory provisions designed to assure that such products are not adulterated or misbranded.

Students will also receive an overview of the different agencies that have jurisdiction over foods, drugs and devices on the state and federal levels, as well as an introduction to the ways in which such agencies exercise their authority through rulemaking, guidance and enforcement activity.

This course will introduce students to the foundational laws and policies governing the production and distribution of foods, drugs and medical devices in the United States, focusing on the Federal Food, Drug, and Cosmetic Act (the "Act") and the role of the Food and Drug Administration in enforcing the Act. The course will cover key concepts and definitions – e.g., "food," "drug," "labeling" – and federal statutory provisions designed to assure that such products are not adulterated or misbranded.

Students will also receive an overview of the different agencies that have jurisdiction over foods, drugs and devices on the state and federal levels, as well as an introduction to the ways in which such agencies exercise their authority through rulemaking, guidance and enforcement activity.

Rules governing food and agriculture can have a dramatic impact on the welfare of farmers, food and farm workers as well as the price of food, access to healthy food, the fate of rural communities, the environment, and animal welfare. This is a fieldwork practicum course that has both 1) a two-credit graded seminar exploring food justice and policy issues and 2) a two-credit fieldwork placement. The fieldwork credits are mandatory pass-fail.

SEMINAR: This seminar portion of the course will advance the Law Center's institutional learning outcomes by covering the policies, rules, and laws that govern food and agriculture, including laws and regulations related to farm subsidies, farm stewardship, pesticide safety, food safety, food labeling, food and farm labor, and animal welfare. The extent to which these policies have discriminated against farmers of color and food and farm workers and limited access to healthy food choices will be a major theme of this practicum. Students will have pervasive opportunities to think critically about the law's claim to neutrality and its differential effects on subordinated groups.

FIELDWORK: In the fieldwork component of this course, students will be assigned to projects with the Environmental Working Group, the Environmental Defense Fund, the Center for Science in the Public Interest, Earthjustice, or other food, farm, worker, environmental justice, and animal justice organizations working on these issues. They will have an opportunity to learn how such institutions play a role in advancing food justice issues being debated in both the administrative and legislative processes, and in matters subject to litigation. Students must work 10 hours per week for 11 weeks for two credits.

Prerequisite: J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Recommended: Administrative law, as well as food and drug law, and environmental law-related courses, are recommended but not required.

Mutually Excluded Courses: Students may not concurrently enroll in this practicum and an externship, a clinic, or another practicum.

Note: This course is suitable for evening students who can commit to attending class and working 10 hours/week (during business hours) on site at their field placements.

This is a four-credit course. Two credits will be awarded for the two-hour weekly seminar and two credits for approximately 10 hours of fieldwork per week, for a minimum of 11 weeks, to be scheduled with the faculty. The fieldwork must be completed during normal business hours. The two-credit seminar portion of this practicum will be graded. The two credits of fieldwork are mandatory pass/fail. Students will be allowed to take another course pass/fail in the same semester as the field work. Students who enroll in this course will be automatically enrolled in both the seminar and fieldwork components and may not take either component separately. After Add/Drop, a student who wishes to withdraw from a practicum course must obtain permission from the faculty member and the Assistant Dean for Experiential Education. The Assistant Dean will grant such withdrawal requests only when remaining enrolled in the practicum would cause significant hardship for the student. A student who is granted permission to withdraw will be withdrawn from both the seminar and fieldwork components. Default attendance rule for all practicum courses (unless the professor indicates otherwise): Regular and punctual attendance is required at all practicum seminars and fieldwork placements. Students in project-based practicum courses are similarly required to devote the requisite number of hours to their project.
This seminar introduces students to the laws and regulations that govern our food. The seminar will focus mostly, but not exclusively, on the federal regulatory framework for food. Topics will include the legal definition of food, rules on food labeling, standards for food safety, provisions for food security, and regulation of the environmental consequences flowing from the agricultural practices that produce our food. Beyond the law itself, we will consider the scientific, economic, and ethical principles implicated by legal decisions concerning food.

LAW 1208 v00 Food Law Seminar

This seminar introduces students to the laws and regulations that govern our food. The seminar will focus mostly, but not exclusively, on the federal regulatory framework for food. Topics will include the legal definition of food, rules on food labeling, standards for food safety, provisions for food security, and regulation of the environmental consequences flowing from the agricultural practices that produce our food. Beyond the law itself, we will consider the scientific, economic, and ethical principles implicated by legal decisions concerning food.

LAW 1298 v00 Global Anti-Corruption Seminar

In 1977, the United States adopted the Foreign Corrupt Practices Act ("FCPA") to combat bribery of foreign public officials. As with many U.S.-led initiatives, it was seen at the time as naïve, quixotic, myopic, and doomed to failure. A little more than 20-years later, the Organisation for Economic Co-operation and Development ("OECD") adopted its Convention on Combatting Bribery of Foreign Public Officials, and as required by the Convention, the countries of Western Europe promptly adopted organic statutes modeled, in large measure, on the FCPA.

In the ensuing decade and a half, prosecutions of corporations for foreign bribery have become perhaps the most important prosecutorial priority for the Department of Justice ("DOJ") and Securities & Exchange Commission ("SEC") and certainly the most financially lucrative U.S. prosecution initiative. Transnational investigations have become a staple of these prosecutions. All 10 of the largest FCPA prosecutions have occurred since 2008; of these, eight have involved foreign corporations.

This course will cover the development of U.S., international, and foreign initiatives against public-official bribery. Because (at least in the US) most of these cases have been resolved without litigation, we will focus on critical, unresolved issues, such as the FCPA’s definition of a foreign “instrumentality” and a “foreign official,” as well as the scope of U.S. extra-territorial jurisdiction. In addition to addressing the substance of foreign and international laws and conventions, we will explore the critical issues that arise from the growing trend in trans-national investigations and prosecutions, including double jeopardy, res judicata, and international data collection.

We will explore these issues through fact-based, real-world scenarios drawn, in large part, from the "Bonny Island" case, which involved a scheme by four international corporations to bribe three successive Nigerian presidents (as well as a constellation of lower-ranking officials) to secure multi-billion dollar contracts for the construction of an LNG facility in Nigeria. We will use this factual setting to frame class participation and in-class exercises and projects, with the goal of sharpening critical thinking, tackling complex legal questions in concrete factual settings, and honing advocacy skills.

Learning Objectives:

We have the following expectations of learning outcomes:

1. We expect each student to achieve mastery of the basic concepts underlying the US Foreign Corrupt Practices Act, including the basic statutory terms, the elements of the various offenses, and the scope of U.S. jurisdiction. In our experience, it is impossible to fully understand and discuss more challenging questions about the scope or application of the statute without mastery of the fundamentals.

2. We expect each student to gain an understanding of the roles and policies of the U.S. enforcement authorities, the Department of Justice and the Securities and Exchange Commission, and the manner in which FCPA cases are investigated, prosecuted, and defended, as well as how the U.S. enforcement agencies would approach a problem and what outcomes are likely to result.

3. We expect each student to gain an understanding of the global enforcement landscape for anti-corruption. Students are expected to achieve a basic understanding of the OECD Convention on Bribery, other international anti-bribery conventions, and the leading state laws, including the Brazil Clean Companies Act, the UK Bribery Act, and the French Sapin II. Students will also gain an understanding of the role of the World Bank and other multi-lateral development banks in the worldwide scheme.

4. We expect students to learn the basic principles of anti-corruption compliance programs, and the manner in which anti-corruption.

5. We expect each student to gain an understanding of the roles and application of the statute without mastery of the fundamentals.
Seminar (CTLS course).

Arbitration or the J.D. seminar, International Commercial Arbitration

This course and International Commercial Arbitration, Introduction

Mutually Excluded Courses:
The equivalent International Law I); International Business Transactions.

This course aims to familiarize students with international commercial

LL.M Course (cross-listed) | 2 credit hours

This course aims to familiarize students with international commercial
arbitration and will follow the traditional steps of international arbitration
This course will not rely

upperclass writing requirement.

Recommended: Constitutional Law and/or Land Use Law.

Note: J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the J.D. Upperclass Legal Writing Requirement. The paper requirements of the two-credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.

LAW 882 v08 International Arbitration (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 882 v08)

LL.M Course (cross-listed) | 2 credit hours

This course aims to familiarize students with international commercial arbitration and will follow the traditional steps of international arbitration proceedings from the registration of the dispute to enforcement and challenges of an award in national courts. This course will not rely solely on US law but, instead, adopt a global approach to international arbitration.

Recommended: International Law I: Introduction to International Law (or the equivalent International Law I); International Business Transactions.

Mutually Excluded Courses: Students may not receive credit for both this course and International Commercial Arbitration, Introduction to Commercial Arbitration, Introduction to International Commercial Arbitration or the J.D. seminar, International Commercial Arbitration Seminar (CTLS course).

LAW 3148 v00 International Business Negotiations (Negotiating International Technology Licenses, International Joint-Venture Contracts and Foreign Investment Contracts) (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3148 v00)

LL.M Seminar | 2 credit hours

As firms from developed countries expand overseas, there is a growing demand for lawyers able to negotiate two types of contracts of increasing importance worldwide: contracts governing international joint-ventures and contracts governing investment by firms in countries other than their own, in particular in developing countries.

The purpose of this experiential course is to make it possible for LL.M. students to acquire the practical knowledge and to hone the skills needed to serve effectively in teams negotiating such contracts.

To this end, the course will be structured around three simulated negotiations of increasing difficulty:

- A simulated negotiation focused on the international licensing of a medical technology, because the transfer of technology is an increasingly important dimension of international joint-ventures and of foreign investments.
- A simulated negotiation focused on the formation of an international joint-venture to produce and commercialize green hydrogen based upon a new technology.
- A simulated negotiation focused on an investment by a firm from a developed country, into an oil-rich developing country, to make it possible to transform gas currently flared, a major source of pollution, into non-polluting products of significant commercial value.

For each simulated negotiation, the class will be divided into two teams that will negotiate with each other. The composition of the teams will differ for each simulated negotiation. During the simulated negotiations, each student will serve at least once as spokesperson for her/his team, engaging the other team on specific issues. After each simulated negotiation, the students who were not spokespersons will draft a memorandum of understanding summarizing what the parties agreed upon.

Learning Objectives:

By the end of the course, the students:

1. Will have gained an understanding of: a) the main issues that arise in the negotiation of each type of contract mentioned above (international joint venture; foreign direct investment), and b) the usual contractual ways to address such issues.
2. Will have honed three main types of skills: a) analysis skills required to design contracts that help both parties in a negotiation reach key strategic objectives; b) interpersonal skills required to constructively engage the other side during a negotiation; and c) writing skills needed to prepare memorandums of understanding (MoUs) that will be a solid basis for the drafting of durable contracts.

Recommended: International Business Negotiations.

Mutually Excluded Courses: Students may not receive credit for both this course and the course formerly known as International Business Negotiations (Negotiating International Joint-Venture Contracts and Foreign Investment Contracts).

Note: Interested students should complete a brief Google form found here (https://docs.google.com/forms/d/e/1FAIpQLSfuL7TTV9nusvef5-NQuC1ha12z_Z2iKm8i228rIdPzVisJw/viewform/?pli=1) with a short explanation of their interest in the course. This seminar is open to LL.M. students only.
LL.M Course | 2 credit hours

The course begins with an introduction to international energy arbitration, followed by discussion of the future of the international energy industry as it transforms to meet the imperatives of climate change. The next section concerns the industry’s value chains, life cycles, and commercial relationships. An extensive presentation on the legal framework for international energy arbitration covers international laws and norms, national constitutions, national petroleum laws and regulations, and the historical development of upstream host government petroleum contracts and petroleum fiscal systems. To place the subject of host government contracts in its proper setting, the next section describes resource politics and resource cycles and examine the legal status of host government contracts. Segments on contract stabilization and choice of law come next.

Identification of the types of upstream host government disputes sets the stage for discussion of the early international oil and gas arbitration awards, from there to several modern international oil and gas arbitration awards, and finally to contemporary energy disputes with host governments. The course then examines commercial disputes arising out of joint operating agreements, gas contracts, and LNG sales contracts. It concludes with a discussion of U.S. court enforcement of energy awards relating to projects in Colombia, Mexico, Laos, and India.

For those students considering international energy arbitration as a career, the course materials end with the professor’s advice on how to build an international energy arbitration practice.

The course provides in-depth knowledge of the main types and key drivers of international energy disputes, including disputes that may arise during the energy transition, and the substantive issues involved in their resolution, not only to aid in understanding the international energy industry, its business relationships and contracts, its broader legal framework, and its disputes, but to build better advocates to represent international energy companies and host governments in these contentious proceedings.

To aid students to learn and retain important facts and features about the international energy industry and its disputes, the course materials contain 19 sets of Key Take-Aways, which appear after each section of materials, except those sections comprising only a few slides.

**Recommended:** Prior or concurrent enrollment in an introductory international arbitration course would be helpful but not necessary.

**Note:** ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety unless the professor has excused their absence. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal.

Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course. While the first three days of this course meet during the Fall add/drop period, a student may only drop this course without a transcript notation prior to the start of the second class session by submitting a written request to the Office of the Registrar. After the start of the second class session, a student must seek permission from an advisor to withdraw.

**Recommended:** International Law I: Introduction to International Law. Other related courses include:

**LAW 3032 v00 International Energy Arbitration**
- The course focuses on international law applicable to the leading environmental and natural resource issues. It provides a framework for identifying and addressing the legal issues, links international law with relevant national laws, and focuses on ways to strengthen compliance with international obligations. The course covers climate change, ozone depletion, transboundary pollution and hazardous waste disposal, fresh water (both surface and ground water), marine resources, biodiversity, the links between human rights and environment and between environment and trade, and the financing of sustainable development. Special attention is given to cutting edge issues, such as synthetic biology and ecocide as an international crime.

Learning goals for this course: To enable students to become effective counsel, litigators, negotiators, arbitrators, judges, or legal advisors on a broad range of international environmental problems; to understand international instruments and negotiations; and to be able to apply legal concepts developed in the course within different national settings for implementing international law.

**Recommended:** Prior or concurrent enrollment in an introductory international arbitration course would be helpful but not necessary.

**J.D. Course (cross-listed) | 3 credit hours**

The course focuses on international law applicable to the leading environmental and natural resource issues. It provides a framework for identifying and addressing the legal issues, links international law with relevant national laws, and focuses on ways to strengthen compliance with international obligations. The course covers climate change, ozone depletion, transboundary pollution and hazardous waste disposal, fresh water (both surface and ground water), marine resources, biodiversity, the links between human rights and environment and between environment and trade, and the financing of sustainable development. Special attention is given to cutting edge issues, such as synthetic biology and ecocide as an international crime.

Learning goals for this course: To enable students to become effective counsel, litigators, negotiators, arbitrators, judges, or legal advisors on a broad range of international environmental problems; to understand international instruments and negotiations; and to be able to apply legal concepts developed in the course within different national settings for implementing international law.

**Recommended:** Prior or concurrent enrollment in an introductory international arbitration course would be helpful but not necessary.
In practicum courses, students do not provide legal advice, prepare legal documents or engage with the public in any way that may lead to a licentiate examination. Fieldwork placements are subject to the professor's discretion and may be withdrawn from the practicum course. Students are required to attend all scheduled meetings and fieldwork placements. Unexcused absences from the fieldwork or project work (out of a total of 11 weeks of fieldwork or project work), may receive a lower grade or, at the professor's discretion, may be withdrawn from the practicum course.

Requisite: J.D. students must complete the required first-year program prior to enrolling in this practicum course and a clinic or another practicum course. Students may concurrently enroll in this practicum course and an externship.

Note: This practicum course is open to LL.M. students.

This practicum may be suitable for evening students who can commit to attending class and participating in 10 hours/week of project work. This is a four-credit course. Two credits will be awarded for the two-hour weekly seminar and two credits will be awarded for approximately 10 hours of fieldwork per week.
LAW 1231 v00 International Law Seminar: Poverty Reduction and Accountability (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1231 v00)
J.D. Seminar (cross-listed) | 2 credit hours
This seminar examines efforts to reduce poverty in countries and the legal issues associated with bringing accountability to doing so. Students should be able to develop insights that can be applied in both the public and private sectors.

Recommended: A basic course in public international law.

LAW 2061 v00 International Litigation and International Arbitration: A Practitioner's Approach (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 2061 v00)
LL.M Course | 2 credit hours
This survey course introduces students to the mechanisms used to resolve cross-border commercial disputes—international litigation and international arbitration—from the perspective of a practitioner. Among the topics examined are (1) the legal and practical advantages and disadvantages of litigation and arbitration, (2) the international legal framework for international arbitration and litigation (including key treaties), (3) key elements of international arbitration agreements (including the negotiation of those agreements), (4) key principles regarding the enforcement of international arbitral awards, (5) basic conflicts of laws principles in international arbitration and litigation, (6) principles and tactics involved in litigating and arbitrating against foreign sovereigns and their instrumentalities, (7) the jurisdiction of US courts over foreign defendants in cross-border cases, (8) the enforcement of US judgments in other national courts, (9) the practice and strategic use of parallel international litigation and arbitration proceedings, and (10) unique features of civil and common law in the resolution of international commercial disputes.

Learning goals for this course: To understand the difficulties of reducing poverty within countries and the legal issues associated with bringing accountability to doing so. Students should be able to develop insights that can be applied in both the public and private sectors.

Recommended: Legal writing.

Mutually Excluded Courses: Students may not receive credit for this course and the International Negotiations Seminar.

LAW 3029 v00 International Negotiations (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3029 v00)
LL.M Seminar (cross-listed) | 2 credit hours
The International Negotiation course will focus on the methods and objectives for successfully engaging in international negotiations. This course will include in-depth reviews and class discussions of negotiations conducted by governments, the private sector, non-governmental organizations, as well as international institutions. The course will provide important insight into the necessary preparations and research necessary to conduct international negotiations as well as a better understanding of the complexities and nuance of actual negotiations. The course will provide students an opportunity to review and dissect previous negotiations and prepare and conduct negotiations based on their understanding of what works and what does not. Discussions will focus on the most important aspects of negotiations—mutual understanding of the expected outcome, in-depth review of the expected positions of the parties, how to accurately understand the extent of any leverage and how to assess a successful outcome. Cultural, linguistic and other possible impediments to a successful negotiation will also be explored to provide students a full understanding of all that goes in to a successful negotiation.

Recommended: Legal writing.

Mutually Excluded Courses: Students may receive credit for this course and International Business Negotiations. Students may NOT receive credit for both this course and International Negotiations or the J.D. course, International Negotiations Seminar.

Note: FIRST-CLASS ATTENDANCE IS MANDATORY. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist.
LAW 2021 v00 International Oil & Gas Industry: Legal and Policy Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 2021 v00)
LL.M Seminar (cross-listed) | 1 credit hour
The scramble to secure steady supplies of inexpensive energy to generate electricity and to power industry and transport has defined much of the twentieth and, thus far, twenty-first centuries. Climate change and renewable energy (appropriately) dominate the discussion today, particularly in the developed world, but, absent a major unforeseen technological breakthrough, non-renewable sources such as oil and natural gas are still expected to meet the majority of the world's energy needs for decades to come (according to the US Energy Information Administration, 82% of energy consumed worldwide will still come from non-renewable sources in 2050).

The oil and gas industry lies at the intersection of global business, international law, geopolitics, the environment and particularly in the developing world, economic development. This seminar will address the international legal norms and public policy principles that have shaped, and continue to guide, this industry. It is designed for students interested in careers in energy, energy policy, project finance, international arbitration, environmental regulation or development – whether for a law firm, energy company, NGO, international organization or government – as well as students simply interested to learn more about an industry that impacts our daily lives in countless ways.

Note: FIRST CLASS ATTENDANCE IS MANDATORY. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist.

Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course. This course is mandatory pass/fail and will not count toward the 7 credit pass/fail limit for J.D. students.

LAW 928 v01 International Project Finance (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 928 v01)
LL.M Course (cross-listed) | 2 credit hours
This course provides a detailed overview and analysis of the technique of project financing in an international environment (particularly in emerging markets). The focus is on the perspectives of the various parties to the project, including output purchasers, providers of goods and services, equity holders, and especially commercial banks, international financial institutions and other lenders. The aspects peculiar to infrastructure projects in specific industries (such as power generation, ports, toll roads, etc.) are also considered.

Learning objectives:
Achieve competency in understanding and analyzing international project finance transactions, from the perspective of the various parties to the project, including:

- Identify, understand and analyze project risks during development, construction and operational phases;
- Analyze transaction structuring and identify contractual and non-contractual risk mitigation and shifting methods for project parties;
- Apply basic finance and legal principles with respect to practical and contractual remedies, as well as dispute resolution mechanisms; and
- Consider specific case studies, as well as sample transaction documents, to better understand the issues that arise in a typical international project financing.

Recommended: Contracts; Accounting Concepts for Lawyers; Conflict of Laws: Choice of Law (or the equivalent Conflict of Laws: Choice of Law (International Focus)); Corporate Finance; Corporations.

Mutually Excluded Courses: Students may receive credit for only one of the following courses: Developing and Financing Infrastructure Projects; International Project Finance and Investment; International Project Finance & Development: Case Studies; Project Development and Finance or Transacting International Finance.
LAW 928 v03 International Project Finance (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 928 v03)
LL.M Course | 3 credit hours
This course examines legal, business and policy issues that arise in international project financings, particularly in emerging markets, and analyzes how such transactions are structured and negotiated and related risks are allocated. We consider the typical roles played by parties to such transactions (equity sponsors, lenders, customers, suppliers and host governments), interests associated with such roles, and how competing interests tend to be reconciled. We will focus on how negotiated arrangements are embodied in and supported by typical transaction documentation such as project documents, financing documents and legal opinions. Coverage will include illustrative local law and political risk issues. Selected international investment transactions, both actual and hypothetical, will be used to illustrate recurring themes.
Course requirements include participation in a simulated international project loan negotiation with outside experts serving as clients.
Recommended: International Business Transactions; Conflict of Laws: Choice of Law; Secured Transactions; Corporate Finance.
Mutually Excluded Courses: Students may receive credit for only one of the following courses: Developing & Financing Infrastructure Projects; Infrastructure Projects in Developing and Transition Countries; International Project Finance; International Project Finance and Investment; International Project Finance & Development: Case Studies; Project Development and Finance or Transacting International Finance.
Note: This course has an additional MANDATORY session on Saturday, April 5, 2025, 8:30 a.m. to 12:45 p.m. Location to be announced at the start of the semester.

LAW 928 v02 International Project Finance and Investment (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 928 v02)
LL.M Seminar (cross-listed) | 2 credit hours
Examines legal and financial aspects of foreign investment projects, especially in developing countries, from the perspective of the investor, lender and the host country. Legal issues related to the structuring of the foreign investment, the arrangement of the private and public financing, and the construction of a project are considered. A significant amount of time will be devoted to analysis of typical international project finance documentation, but the international and host country legal issues applicable to foreign investment, support from national and multinational agencies, noncommercial risk analysis and dispute resolution will also be considered and discussed.
Prerequisite: A course in International Business Transactions, or background in international business or financial transactions.

LAW 244 v01 International Trade (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 244 v01)
J.D. Course (cross-listed) | 3 credit hours
This three-credit survey course is designed to introduce students to the legal system governing international economic transactions and international economic relations, with a focus on the World Trade Organization (WTO) and its constituent treaty instruments. The primary objective of the course is to give the student an in-depth overview of the world trading system and some exposure to its particular details. The course will cover the basic principles and mechanisms of international trade law, including most-favored-nation (MFN) and national treatment, and relevant law in different substantive areas, including tariffs, quotas, services, intellectual property, trade remedies, and standards. We will also examine the issue of development in the WTO and trade treaties and whether treaty obligations constrain countries' policy autonomy and hinder their ability to pursue successful development strategies, as well as the tensions between trade liberalization and other values, such as those concerning the environment, health and safety, workers' welfare, and human rights.
The course will also cover current trends and issues in international trade law. The Uruguay Round established the WTO in 1994 as the premiere forum for negotiating multilateral trade agreements and adjudicating international trade disputes; however, the negotiation and adjudication functions of the WTO currently face significant challenges. Globally, more than 300 regional or bilateral trade agreements have been negotiated, including the recent United States-Mexico-Canada Agreement (USMCA) and Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP), with implications for both individual countries and the global trading system overall. The course will include current developments at the WTO, bilateral and regional trade agreements (including U.S.-Europe and U.S.-Kenya negotiations and trade models in other parts of the world like China's Belt and Road Initiative and the African Continental Free Trade Area), Brexit, and U.S. "trade wars" pursued on national security grounds.
Mutually Excluded Courses: Students may not receive credit for both this course and International Trade and the WTO or International Trade Law or World Trade Organization: Law, Policy and Dispute Settlement; or the graduate course, International Trade Law and Regulation.
This three-credit course introduces students to the legal and policy aspects of international trade and investment law, two pillars of international economic law that have developed dispute settlement systems. These two areas of law affect a broad array of national legislation, regulation, and administrative practice, as well as other areas of international law and policy, such as development, human rights, climate change, and other environmental issues. Both trade law and investment law have raised anxieties regarding their linkages, effects, and overlaps with non-economic issues. The United States, European Union, China, and many other countries have actively engaged in litigation and new negotiations in both fields of law. In international trade law, governments bring legal claims against each other for breaches of obligations, while private lawyers work with private commercial interests behind the scenes and often directly on behalf of governments. International investment law, in contrast, provides direct rights to private foreign investors to bring claims against governments. These disputes are proliferating and sometimes overlap with international trade law claims. In the past, the U.S. always sought protection for its investors in developing countries, but with shifts in the global economy, the U.S. increasingly became subject to such suits by foreign investors. This course will introduce students to both of these areas of international law practice.

**LAW 244 v05 International Trade Law**

(J.D. Course (cross-listed) | 3 credit hours)

Economic interdependence between countries and across production chains has grown exponentially. Yet, today, economic globalization is under attack. In this context, existing rules on international trade, and negotiating fora to potentially change those rules, are key. This course focuses on the rules and institutions established under the World Trade Organization (WTO) as well as selected regional trade agreements. What are the benefits and risks of trade liberalization from legal, economic and political perspectives? How can trade liberalization go hand in hand with pursuing public policy goals such as protecting the environment or labour standards (“non-trade concerns”), job creation or promoting the economic development of poor countries? The course will offer an in-depth, practical knowledge of substantive WTO law drawing heavily on case law from dispute settlement practice. It will address the basic principles of trade in goods and trade in services as well as more specific WTO agreements on, for example, health measures, subsidies, trade remedies and intellectual property rights. The course will also focus on the unique WTO mechanism for the settlement of trade disputes, and especially on how it balances trade liberalization with non-trade concerns as well as how it copes with increasing trade tensions between OECD countries and emerging economies like Brazil, China, India and Russia.

**Mutually Excluded Courses:** Students may not receive credit for both this course and the J.D. course, International Trade or World Trade Organization: Law, Policy and Dispute Settlement.

**Note:** There are no prerequisites for this course.

This course will meet 2 times per week in the weeks of August 30 - September 17 and October 11 - October 29. In addition, there will be three classes taught remotely on October 7, November 11 and November 16.
LAW 1770 v00 International Trade Rules and Climate Change Seminar - Can the Two Get Along? (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1770 v00)

J.D. Seminar (cross-listed) | 2-3 credit hours

Global climate change is one of the most significant environmental challenges of the 21st century. Because the emissions of greenhouse gases (GHGs) result from virtually every kind of economic activity -- driving a car, heating a home, operating a cement factory, raising chickens -- any policy aimed at reducing emissions will have significant and broad-based impacts on domestic economies around the world. And because most of those economic activities involve the movement of goods, services, people or intellectual property rights across international borders, policy actions taken in response to climate change can implicate global trading rules.

As countries around the world adopt different approaches to addressing the threat of climate change, the risk of conflict between basic rules governing international trade and measures taken to control GHG emissions rises. This seminar will explore those overlaps and potential for conflict versus the opportunity for the global trading system to contribute to the reduction in GHG emissions. The course will include a survey of the basic international rules touching on climate change, including the Paris Agreement, underlying UNFCCC documents, the UN’s sustainable development goals, human rights agreements and the basic international trade rules of the World Trade Organization (WTO) and key regional agreements, including the EU treaties and the USMCA. It will examine a number of the key issues at the intersection of trade and climate, including whether and under what conditions countries can impose a carbon border adjustment mechanism that is consistent with the WTO rules; the increasing use of government subsidies to promote the development and use of green technologies and whether new rules on subsidies are needed to regulate them; the increased clamoring for the sharing of cutting-edge green technologies, notwithstanding the WTO’s intellectual property rules; the growing volume of cross-border trade in electricity and the expansion of renewable energy and intellectual property rights feeding into internationally-operated smart grids; the need for the development of accepted and enforced standards for “green” finance; and the implications of climate change for human rights and immigration policies as rising sea levels, severe droughts and extensive fires force massive migrations.

The seminar will also explore the areas in which the trading system could make a positive contribution to the fight against GHG emissions, including the options for limiting fossil fuel and fishery subsidies and supporting the financing of renewable energy facilities. In addition, it will examine whether the current exceptions to the trading rules provide sufficient policy space for innovative approaches to climate change.

Learning Objectives: The primary objective of this course is for students to develop an understanding of the potential for conflicts between trade measures and trade rules with efforts to restrain or tax GHG emissions, along with WTO-consistent policy and financial options to support the fight against climate change. The course will give students to opportunity to develop cutting-edge proposals of significant value to political and thought leaders around the world about how best to use the trading system to support climate mitigation and adaptation measures.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the Upperclass Legal Writing Requirement.

Only the 2-CR section will fulfill the WTO & International Trade Certificate List B requirement. Only the 3-CR section will fulfill the WTO & International Trade Certificate List C requirement.

LAW 959 v00 International Trade, Development & the Common Good (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 959 v00)

LL.M Seminar (cross-listed) | 2-3 credit hours

This course will examine the connection between trade law and development, including aspects of international and regional trade agreements, comparative law, and diverse areas of market regulation at the national level. Overall, the seminar will highlight the role of law and regulation as a driver for sustainable development and inclusive growth and link broader legal frameworks and policy debates with the needs of individuals and enterprises. It will engage students in ways in which economic law can help encourage sustainable and inclusive development and will assess challenges associated with legal and regulatory capacity and the uneven implementation of laws in practice. Cross-cutting and inter-disciplinary approaches in the field, such as socio-legal approaches, human rights, food security, the UN Sustainable Development Goals (SDGs), and gender and trade will also be discussed throughout the seminar.

The seminar will take place in three phases. In Phase I, the seminar will explore the historical and institutional relationship between trade and development, including World Trade Organization (WTO) disciplines, regional trade agreements (RTAs), and other relevant international legal frameworks. Phase II will focus on different issues and will cover a number of substantive aspects of trade and development in depth, all of which impact stakeholders and communities and hold greater potential to contribute to the common good. Specific areas of focus will include domestic market regulation and investment, non-tariff measures, regulation of services, trade facilitation, agriculture, labor and environment, intellectual property rights, gender, and digital trade.

Phase III of the course will consist of an in-class exercise to apply the theory and substantive legal approaches discussed in Parts I and II in the context to practical trade and development challenges.

Readings will be drawn from a variety of viewpoints and sources – law review articles, white papers, academic journals, newspapers and magazines, and excerpts from books – and will cut across trade and economic law, inclusive economic development, and business. The readings will highlight different aspects of the legal and regulatory environment in the context of encouraging sustainable and inclusive development globally and at the grassroots level. Discussion questions will be provided for each session, which can be used as the basis for class preparation.

The course will also incorporate short, practical case studies that illustrate how different issues in trade, development, and economic regulation can be applied from the perspective of different stakeholders (entrepreneurs, countries, and communities). Seminar members will be asked to assume roles in discussion of these case studies, which will count towards class participation and lay the groundwork for the final paper. Questions to guide the case study analysis will also be provided.

In addition to the readings assigned for each session, optional background readings will be included for students wishing to explore a topic in greater depth (additional background reading is recommended for students who have not taken a trade law course, but the course does not have any prerequisites).

Note: Only the 3-CR section will fulfill the WTO & International Trade Certificate List C requirement.

This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.
LAW 272 v00 Land Use Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 272 v00)
J.D. Course (cross-listed) | 3 credit hours
This course explores the variety of ways in which the law attempts to resolve conflicts among land uses, as well as plan and regulate the impacts of different land use patterns. Topics will include common law; state, regional, and local planning; zoning; environmental controls; growth management; historic preservation; restrictions relating to residential development; and constitutional limits on land use regulation. Particular emphasis will be placed upon analysis of the political and economic context of land use law.

LAW 292 v07 Law and Development (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 292 v07)
J.D. Course (cross-listed) | 3 credit hours
This three-credit survey course is designed to introduce students to the different dimensions of law and development, integrating legal, historical, academic, and practical models and approaches. The course will cover a range of issues and substantive areas of law, including economic and social development and rule of law approaches; human rights law; comparative law; peace and security; international economic law (including trade, finance, aid, and investment); labor, environmental, and health law; market regulation; institutional models for advancing law and development; gender; and sustainable development. It will also examine the increasing role of technology in law and development and the connection between law and the United Nations Sustainable Development Goals (SDGs). Throughout the semester, the course will explore how different areas of law address questions of equity, inclusiveness, vulnerability, and environmental sustainability. There are no prerequisites for this course, and it is intended to be both an introduction to law and development and a complement to other course offerings at Georgetown Law.

The course is divided into three parts. The first part begins with an exploration of the foundations of law and development, including an examination of the issues, debates, and academic literature. This portion of the course will examine the role of governments and institutions in law and development (including the World Bank, WTO, IMF, UN system, donor organizations, regional organizations, and others), as well as how rules are designed and implemented from the perspective of individual and community stakeholders. Part I of the course will also highlight the evolution of different approaches, theories, and models within law and development, including economic approaches (structural change approaches, dependency theory, neoclassical/neoliberal approaches, endogenous growth theory, post-Washington consensus models, and others), promotion and criticism of rule of law approaches (legal pluralism, institutionalism and new institutional economics, constitutionalism, international vs. national law approaches, legal empowerment, informalism, and others), and current movements such as law and political economy and TWAIL (Third World Approaches to International Law).

The second part of the course will introduce students to the different substantive dimensions of law and development. This segment will allow students to both understand the legal foundations of different aspects of law and development and explore intersections between different areas of law as they relate to development, highlighting the cross-cutting nature of law and development. Topics will include human rights law, international economic law (finance, investment, and trade), conflict and resource control, gender and development, corruption and development, development assistance, and law and development aspects of health, environment, and climate change.

The third part of the course will focus on issue-based and regional case studies, allowing students to apply what was covered in the first two parts of the course in different contexts and explore ways in which law has been – or could be – a driver for development. Issue-focused case studies will include land tenure and contracts, labor, agriculture and food security, intellectual property rights, and data and development. Regional case studies will include Africa, Asia (with some focus on China and India, among other countries), and Latin America. In this part of the course, students will also assess which law and development approaches have been best suited to different circumstances, economies, cultures, and communities.

Learning Objectives

The course has several interconnected learning objectives:

• Understand the legal, historical, economic, and political context of law and development;
• Equip students with the knowledge and tools to approach law as a tool for promoting social, economic, and sustainable development;
• Introduce students to different roles for lawyers in the field of law and development;
• Be familiar with different areas of law and development;
• Assess how different areas of law address questions of equity, inclusiveness, vulnerability, and environmental sustainability;
• Be able to explain how economic, social, and sustainable development can be further incorporated into soft and hard law, as well as international, regional, and national law;
• Be able to interpret academic research, relevant excerpts from international treaties, provisions in bilateral and regional agreements, and laws and regulations;
• Be able to understand and analyze different normative approaches to law and development, including economic, social, and environmental aspects;
• Be able to examine different normative approaches to law and development, including economic, social, and environmental aspects;
• Be able to introduce students to the different substantive dimensions of law and development;
• Be able to explore intersections between different areas of law as they relate to development;
• Be able to highlight the cross-cutting nature of law and development;
• Be able to cover a range of issues and substantive areas of law, including economic and social development and rule of law approaches; human rights law; comparative law; peace and security; international economic law (including trade, finance, aid, and investment); labor, environmental, and health law; market regulation; institutional models for advancing law and development; gender; and sustainable development.

The course is divided into three parts. The first part begins with an exploration of the foundations of law and development, including an examination of the issues, debates, and academic literature. This portion of the course will examine the role of governments and institutions in law and development (including the World Bank, WTO, IMF, UN system, donor organizations, regional organizations, and others), as well as how rules are designed and implemented from the perspective of individual and community stakeholders. Part I of the course will also highlight the evolution of different approaches, theories, and models within law and development, including economic approaches (structural change approaches, dependency theory, neoclassical/neoliberal approaches, endogenous growth theory, post-Washington consensus models, and others), promotion and criticism of rule of law approaches (legal pluralism, institutionalism and new institutional economics, constitutionalism, international vs. national law approaches, legal empowerment, informalism, and others), and current movements such as law and political economy and TWAIL (Third World Approaches to International Law).

The second part of the course will introduce students to the different substantive dimensions of law and development. This segment will allow students to both understand the legal foundations of different aspects of law and development and explore intersections between different areas of law as they relate to development, highlighting the cross-cutting nature of law and development. Topics will include human rights law, international economic law (finance, investment, and trade), conflict and resource control, gender and development, corruption and development, development assistance, and law and development aspects of health, environment, and climate change.

The third part of the course will focus on issue-based and regional case studies, allowing students to apply what was covered in the first two parts of the course in different contexts and explore ways in which law has been – or could be – a driver for development. Issue-focused case studies will include land tenure and contracts, labor, agriculture and food security, intellectual property rights, and data and development. Regional case studies will include Africa, Asia (with some focus on China and India, among other countries), and Latin America. In this part of the course, students will also assess which law and development approaches have been best suited to different circumstances, economies, cultures, and communities.
LAW 1903 v00 Law and Sustainability Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1903 v00)
J.D. Seminar (cross-listed) | 2-3 credit hours
An ever-increasing flow of capital into Environmental Social Governance (ESG) investment funds has inspired private ordering that looks to shareholder proposals, institutional investor agendas, proxy voting guidelines, and ESG ratings as tools for mitigating the public impacts of corporate activities. A new generation of shareholders departs from wealth-maximizing norms and professes to care about corporate impacts on environment and society. Their investment practices and expectations challenge the traditional terms of corporate governance. This seminar surveys leading theories of corporate purpose, examines various private law efforts to promote corporate stakeholderism, and interrogates challenges that arise through the pursuit of social welfare using the tools of corporate law and governance.

Learning Objectives: At the end of this seminar, students should:

1. Be familiar with the general approaches to the study of law and legal reasoning;
2. Demonstrate the ability to identify and understand key concepts in substantive law, legal theory, and procedure;
3. Have the ability to write a competent legal analysis and/or effective transactional documents;
4. Demonstrate the ability to conduct legal research;
5. Demonstrate communication skills, including oral advocacy and/or negotiation skills;
6. Demonstrate an understanding of the interdisciplinary nature of law and the contributions that other disciplines can make to the study of law.

Prerequisite: Corporations.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.

LAW 1542 v00 Law, Policy, and Practice of Disasters and Complex Emergencies (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1542 v00)
J.D. Seminar (cross-listed) | 2 credit hours
This course is a “disaster law” simulation based on the post Hurricane Katrina legal reforms, particularly the Post Katrina Emergency Management Reform Act. That bill, along with ones passed in response to Hurricane Sandy, reorganized the United States emergency management system and highlighted the particular issues of vulnerable groups.

This simulation course will give students an in-depth experience of working on disaster law issues in the context of a legislative inquiry and hearing. Students will conduct mock interviews, review legislation and legal precedent, and then conduct a legislative hearing to determine whether further changes to the law are necessary. This course present students with the opportunity to work in an emerging area of law, honing their legal skills with a focus on disaster victims and vulnerable populations.

Prerequisite: Students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Recommended: Environmental Law or similar course or clinic

Strongly Recommended: Administrative Law or Legislation Clinic

Note: In Spring 2024, this seminar will meet on 4/6, 4/7, 4/12 and 4/13.

ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal. Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.

LAW 324 v00 Maritime Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 324 v00)
J.D. Course (cross-listed) | 2 credit hours
This course surveys various principles and aspects of admiralty and maritime law of the United States, including: the historical and constitutional bases for its existence; the admiralty and maritime jurisdiction of the courts; the substantive law of maritime contracts and maritime torts; the application of criminal law at sea; the laws governing carriage of goods and passengers by sea; the public order of the oceans at the national and international levels; protection of the marine environment; and federal-state maritime issues. Consideration is given not only to the current state of the law in these areas, but also to related U.S. government policies and international and comparative law issues.
LAW 922 v01 National Security & the Law of the Sea (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 922 v01)
LL.M Course (cross-listed) | 2 credit hours
This course reviews the basic principles of international law related to the many exclusive and inclusive uses of ocean space, especially on those critical issues affecting U.S. national security. Students will develop a comprehensive understanding of the legal regimes governing the ocean, from internal waters and other coastal zones through the regimes of the high seas, and an overall appreciation for U.S. ocean law and policy, based on relevant principles of international and national law. Topics include navigation and overflight rights, living and non-living ocean resources, military and law-enforcement activities, protecting the marine environment, marine scientific research, the law of naval warfare, and the formal and informal processes for developing ocean policy and for resolving international disputes. Students will research and engage in class discussions on a number of problems involving national security issues and the use of ocean space, including resources on the continental shelf, maritime terrorism, military exercises, maritime transportation systems, at-sea trafficking in illicit drugs, piracy, weapons of mass destruction, collection of intelligence, and naval rules of engagement.

Recommended: International Law I: Introduction to International Law (or the equivalent International Law I).

Mutually Excluded Courses: Students may not receive credit for both this course and the course formerly known as Oceans Law and Policy.

LAW 1619 v00 Natural Resources and Energy Law and Policy Practicum (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1619 v00) (Project-Based Practicum)
J.D. Practicum (cross-listed) | 4 credit hours
This course will give students an experiential learning experience in the field of natural resources and energy law and policy. Students will work individually or in groups on real-world legal and/or policy problems related to natural resources or energy for clients or stakeholders currently engaged in this rapidly changing subject area.

The seminar portion of the course covers the key elements of natural resources and energy law and policy related to the experiential learning projects. Students will study the relevant statutes, case law, and underlying policies relating to these natural resources and energy issues. The course is primarily domestic in its focus, but some topics and examples of international natural resources and energy law and policy will be included. During the course, students will draw on pertinent and practical legislative and administrative materials.

Throughout the semester, we will focus on building real-world legal and policy skills. We will discuss the successes and failures of natural resources and energy law and policy, the trade-offs between preservation and development, future prospects for effective resource management and conservation, and the skills needed to effectuate successful outcomes on behalf of clients.

This is a four-credit course, with two credits awarded for the two-hour weekly seminar and two credits for work outside of class on experiential learning projects. The class is designed to be appropriate for both law students and public policy students.

Course Goals:

1. The course is intended to help you develop your legal skills. During the experiential portion of the course, you will develop legal skills by working on a real-world legal or policy problem for a client. You will prepare a written analysis appropriate for delivery to the client. You will also prepare an oral presentation of your work, including findings and recommendations for the client. In undertaking this project, you will develop in-depth expertise on a natural resources issue as assigned.

2. In preparing the written analysis for your client, you will have an opportunity to hone your legal writing and analytical skills. You will consider and determine how best to present your analysis and findings to the client in written form.

3. You will also develop your skills in oral communication as you prepare and deliver a formal oral presentation of your project for the class and also for your client.

4. By the end of this course, you should have a broad understanding of the overall legal framework for the administration of domestic natural resources. The focus will be on federal law and policy as it relates to the experiential projects being undertaken by the class, but you should also gain insights into selected state and international topics, particularly the interaction between federal and state law and policy.

5. The course should provide you with a context for evaluating ongoing and fast-changing legal and policy issues and controversies relating to energy and natural resources.

Mutually Excluded Courses: Students may not receive credit for this course and Natural Resources Law: Energy, Water and Land Resources. Students may not concurrently enroll in this practicum course and a clinic, or another practicum course. Students may concurrently enroll in this practicum course and an externship.

Note: This is a four-credit course, with two credits awarded for the two-hour weekly seminar and two credits for work outside of class on experiential learning projects. The course is graded.
LAW 329 v00 Natural Resources Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 329 v00)
J.D. Course (cross-listed) | 3 credit hours
This course surveys the laws governing the ownership, conservation, exploitation, and preservation of renewable and non-renewable natural resources, such as wildlife, wilderness, parks, rangeland, water, minerals, and forests. The course explores the philosophical, constitutional, historical, and economic underpinnings of natural resource law as well as the role of interest groups in natural resource policy formulation. Current issues, such as those relating to takings and federalism, are also examined.

LAW 329 v01 Natural Resources Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 329 v01)
J.D. Course | 2 credit hours
This course surveys the federal laws, regulations, and constitutional provisions governing the ownership, conservation, exploitation, and preservation of renewable and non-renewable natural resources, such as public lands, wildlife, wilderness, parks, rangeland, fish, and forests. The course explores the philosophical, historical, and economic underpinnings of natural resource law. Emphasis will be placed on how agencies address natural resource issues and how courts resolve disputes in this area. Current issues, such as those relating to renewable energy and biodiversity, will also be examined.

LAW 3077 v00 Oil and Gas Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3077 v00)
LL.M Course (cross-listed) | 2 credit hours
This seminar will provide an overview of oil and gas law, from its traditional roots in the common law of property and contract to more recent developments in administrative law and regulations. We will learn about how the law has shifted from a focus on production to a concern for safety and the environment. The course goal is to introduce students to the topics involved in the practice of oil and gas law, with an eye toward preparing for an oil and gas section of a bar exam (e.g., Texas). In addition to traditional issue such as surface management, drainage, royalties, and the oil and gas lease, we will consider modern-day complexities posed by exploration in the eastern United States, offshore drilling, and hydraulic fracturing.

LAW 2054 v00 Regulation of Commodities and Derivatives Markets (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 2054 v00)
LL.M Seminar (cross-listed) | 2 credit hours
This course will focus on US federal and state laws and regulations affecting commodities (e.g., energy, GHG emissions, agriculture, metals, forex, cryptocurrency) and the related derivatives (i.e., swaps, futures, and options) markets. Topics include: (1) overview of the origins of derivatives and commodity trading generally; (2) the concepts of hedging and speculation; (3) the evolution of the Commodity Exchange Act of 1936 (CEA); (4) the current jurisdiction of the Commodity Futures Trading Commission (CFTC) and the Securities and Exchange Commission (SEC) in the post-Dodd-Frank world; (5) application of commodity trading and derivatives statutes, regulations and Congressional proposals for new products, such as bitcoin, blockchain and other FinTech innovations; (6) analysis of energy and emissions-based derivatives as well as ESG and climate change mitigation policies; (7) discussion of recent developments in exchange trading, such as De-Fi and event contract trading; (8) registration and regulation of market participants, such as brokers, hedge fund operators, investment advisers, swap dealers, cryptocurrency intermediaries; (9) administrative and injunctive enforcement powers involving violations of the CEA; (10) current developments in self-regulatory oversight; (11) documentation of derivatives (e.g., ISDA) and commodity transactions; and (12) foreign market access to commodity and derivatives trading and developments in the EU and Asia.

Students who complete this course will have a solid understanding of the CEA and CFTC’s rules and regulations under the CEA as well as federal relevant cases. In addition to learning the black-letter law, the students will learn how derivatives and commodities markets work in the US and overseas and how securities, energy, emissions, agricultural and financial markets interact with these markets. Through a series of in-class exercises culminating with the final paper students will develop their research, analytical and writing skills.

Recommended: Bankruptcy, banking.
Strongly Recommended: Securities, corporations.
Learning Objectives:

1. Develop baseline knowledge of key state and federal laws and policies impacting the development and financing of wind and solar energy projects in the U.S., and the interplay between such different levels of regulation.

2. Demonstrate an ability to analyze and explain a particular state’s regulatory regime in respect of the development of certain renewable energy projects located therein.

3. Develop an understanding of the main legal documents (a) governing project development and (b) for project financing, and key provisions (including risks and mitigants, and market commercial terms) for each.

4. Demonstrate an ability to, in cooperation with an assigned team, utilize such background knowledge to analyze a specific set of wind or solar project development documents, including the risks and proposed or actual mitigants in respect of the development and financing of such project.

Learning Objectives:

At the end of the course. Students will have acquired an understanding of the various definitions of ‘rule of law’ and the factors leading to and preventing successful reform efforts.

At the end of the course, students will have acquired some understanding of the differences and similarities among international organizations and their approaches to Rule of Law to be able distinguish varying objectives (e.g. democracy promotion, economic development, human rights and social justice, anti-corruption and law enforcement).

At the end of the course, students will have acquired a vocabulary and understanding of overlapping (and even inconsistent agendas) to be able to identify the “drivers” of reform and provide inputs for the design or evaluation of Rule of Law reform efforts.

Recommended: International Law I: Introduction to International Law is suggested but not required. Familiarity with international organizations would be useful but not required.

Note: Students may not withdraw from this class after the add/drop period ends without the permission of the professor.
LAW 3147 v00 Sustainability for Big Law and Big Business (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3147 v00)
LL.M Seminar (cross-listed) | 2 credit hours
Sustainability issues such as climate change, human rights and racial justice have become the defining challenges of business. International corporations must navigate a complex web of regulatory and policy challenges to assure their long-term viability. In response to statutory, investor and customer pressures, Environmental, Social and Governance (ESG) factors are fundamental to how Boards and Senior Executives are valuing strategic opportunities and their overall risk profile. Lawyers will play an increasingly critical role in advising on trends related to: (i) the greater integration of sustainability within policy and legislation; (ii) the appetite of investors for ESG considerations within their investment portfolios; (iii) the demand for greater transparency and uniform disclosure; (iv) the growth of green and social impact investment products; and (v) the heightened calls for racial equity and social justice. This course will provide a general overview of the statutory and regulatory frameworks required to advise businesses on these ESG challenges and explore how evolving interpretations of “fiduciary duty” and “corporate purpose” may help or hinder the ability of business to make a meaningful impact on climate change and other social issues.

Learning Objectives:
At the conclusion of the class, students should be able to:

- Identify the key legal ESG issues involved in corporate transactions (investments, acquisitions and due diligence);
- Understand how risks can be mitigated related to climate change litigation and other ESG claims; and
- Evaluate the effectiveness of policy initiatives designed to increase the social impact of business.

Mutually Excluded Courses: Students may not receive credit for this course and Corporate Purpose and Environmental, Social and Governance (ESG) Issues Seminar.

LAW 945 v00 Taxation of Energy Markets (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 945 v00)
LL.M Course (cross-listed) | 2 credit hours
The energy industry has undergone dramatic change in recent years. The US power sector is undergoing a transformation from a coal-based sector to one that now has incredible diversity between natural gas, wind, solar and even nuclear energy now leading the way in new development. Likewise, the oil and gas sector has seen a revolution in responses to changing US energy policy and energy politics. More so than almost any other industrial sector, energy is highly influenced by the tax law. The economics of renewable and alternative energy is highly dependent on specific tax credits designed to encourage their development.

This course will examine these important areas of energy tax policy:

1. taxation of electric utility and natural gas markets (including tax changes flowing from deregulation of these markets),
2. tax subsidies and tax incentives for alternative energy development (including analysis of creative tax-planning structures designed to maximize the value of these incentives), and
3. new tax incentives included in the Inflation Reduction Act of 2022.

The course is designed to help students appreciate the role tax plays in the generation of energy in the US and issues confronted by tax practitioners in this rapidly changing environment. There will be a final examination at the end of the semester. Class attendance and participation is encouraged.

Prerequisite: Federal Income Taxation.

Recommended: Corporate Tax Law I or Corporate Taxation (formerly Taxation II).

Note: This course is part of the following graduate programs: Environmental and Energy Law LL.M.
LAW 1099 v00 The Art of Regulatory War Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1099 v00)

J.D. Seminar (cross-listed) | 2-3 credit hours

This seminar focuses on “the art of regulatory war.” How can lawyers and other stakeholders working at the regulatory intersection of law and politics gain advantage, use their different sorts of legal artillery and strength, and push regulatory disputes and tool choices into venues, modes, and postures that favor their clients’ interests and possibly broader policy goals? What changes are underway regarding the nature of regulation, attitudes about the role of the administrative state, and ways regulatory wars are fought?

Subject to adjustment in light of legal developments and student interest, the seminar meetings will be organized around a mix of case studies and cross-cutting regulatory topics. For Fall 2024, the seminar will have a substantial advanced administrative law and risk and environmental regulation focus, but with some materials focused more generally on regulatory disputes, methodologies and strategies, and the role of the administrative state. Topic-based classes will likely select from among the following: critiques of assumptions of regulatory overreach and empire building; federalism and preemption as doctrines and terrains shaping regulatory disputes; theories of regulation and regulatory reform proposals; recent presidential and agency deregulatory and policy change efforts and judicial and scholarly responses; debates and shifting doctrine regarding deference regimes, especially if the Supreme Court in 2024 substantially changes longstanding deference regimes; implications and critiques of the “major questions doctrine” as recently embraced by the Supreme Court; the shift to market-based and experimental “rolling rule” modes of regulation; and “sound science” and “bought science” and the problem of regulatory lying. Case study subjects will likely include a mix of the following: my own research into the 1971-85 battles over the multi-billion dollar Westway project defeated by a small number of citizens; climate change regulatory developments; and court, regulatory and legislative battles over protecting “waters of the United States” under the Clean Water Act.

Readings will include diverse materials to illuminate the art of regulatory war, including court decisions, briefs, legislative and regulatory materials, statutory provisions, and scholarship. Students will be required to submit a few brief comments or questions about the readings, with class discussion building on those areas of interest. Students will have broad latitude to develop related paper topics based on their own interests and goals. During the last few weeks of the semester, we will conclude with students sharing and leading discussion of their draft papers, with students critiquing each other’s drafts. There are no seminar prerequisites, but students interested in administrative law, constitutional law, economic and risk regulation, environmental law, energy law, legislation, law and politics, law and economics, litigation and other areas of public law should find the material of interest.

Note: This seminar requires a paper. J.D. students must register for the 3 credit section of the seminar if they wish to write a paper fulfilling the Upperclass Legal Writing Requirement. The paper requirements of the 2 credit section will not fulfill the J.D. Upperclass Legal Writing Requirement.

LAW 3002 v00 The Law and Policy of the Energy Transition (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 3002 v00)

LL.M Seminar (cross-listed) | 1 credit hour

Overview

This course will review the most critical policy, legal, and regulatory issues faced by the energy sector actors (coal, oil, gas, renewable energy sources, and minerals), such as governments, investors, corporations, insurers, and citizens when facing the challenges of the 21st-century energy transition. The discussion and analysis will take place considering the apparently competing perspectives of climate, development, and energy needs.

Through the different topics addressed in the course, we will analyze how volatile adherence to the rule of law worldwide, the increasing environmental and social challenges, corruption, and geopolitical challenges affect policymakers, legislators, regulators, and the private sector decision-making process. Energy players face long-term capital investment decisions in even more rapidly changing environments. Legal counsel in these cases involves a substantial role in evaluating and mitigating risk as well as preventing and resolving disputes. The course will analyze the key legal and extra-legal (policy) factors that lawyers must understand to provide comprehensive advice. Although we will review some financing structures, this course is not a project finance or a specialized finance course. Due to the course structure that Georgetown gently accommodated due to my current professional obligations, this course could be considered an introductory overview of the most pressing issues discussed in energy law (an inherently international and transnational area of law) and how players are facing such challenges.

Format

We will have six discussion sessions or around 2.5 hours each, with one lecture introduction (approx. 30 min), discussion preparation in groups (approx. 30 min), discussion (approx. 1 hour), and debrief (approx. 30 min.):

- Discussion No. 1 - Emissions or fuels problem?
- Discussion No. 2 – Is the renewable energy increase possible?
- Discussion No. 3 – What is the best mechanism to accelerate the energy transition?
- Discussion No. 4 – How do we solve energy poverty? How do we guarantee energy security?
- Discussion No. 5 – Energy transition means economic diversification, right?
- Discussion No. 6 – A new world order? The role of international organizations, policymakers, legislators, and courts in the energy transition.

The discussions will be based on the following premises/problems (evidently, the premises could also be discussed during the course), where we will analyze the relevant policy and legal challenges. Finally, I need to explicitly state that all my expressions, written or verbal, are made in a personal capacity and do not necessarily reflect my employer’s position.

Note: ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal.

Enrolled students will have until the beginning of the second class...
LAW 1019 v00 The Law of Public Utilities: Bringing Competition to Historically Monopolistic Industries

J.D. Seminar | 2-3 credit hours

Our major infrastructural industries—electricity, gas, telecommunications, transportation and water—were historically controlled by monopolies. Since the 1980s, efforts to introduce competition into these industries have met obstacles. Battles before legislative bodies, regulatory agencies and courts, at the state and federal levels, have produced a distinct body of law. That body of law—the law of introducing competition into historically monopolistic industries—is the subject of this course.

From the principles learned in the course, students have written papers on such diverse topics as renewable energy, internet, movie production, chicken slaughtering, student loans, pharmaceutical research, Uber, Flint’s water crisis, utility corporate form, law school admissions, farms seeds and insecticide, Youtube, private space travel, rare minerals used in solar and wind facilities, Facebook, cloud storage, electric storage, and telemedicine at the VA. Some of these papers have made their way into professional journals or law journals.

Regardless of the industry or era, the regulation of infrastructural monopolies and their competitors has five common elements: its mission (to align business performance with the public interest); its legal principles (ranging from state law on exclusive monopoly franchise to federal constitutional protection of shareholder investment); policy flexibility (accommodating multiple public purposes, from service reliability to environmental accountability to protection of vulnerable citizens); reliance on multiple professional disciplines (law, economics, finance, accounting, management, engineering and politics); and formal administrative procedures, such as adjudication and rulemaking.

Today, political challenges are causing policymakers to stretch regulation’s core legal principles. Four examples of these challenges are: climate change (e.g., To what extent should we make utilities and their customers responsible for “greening” energy production and consumption?); universal service (e.g., Should we bring broadband to every home, and at whose cost?); privacy (How do regulators induce personal changes in energy consumption while protecting the related data from public exposure?); and protection of our infrastructure from hackers, terrorists and natural catastrophes.

Complicating these political challenges are two sources of constant tension: ideology (e.g., private vs. public ownership, government intervention vs. “free market”); and state-federal relations (e.g., Which aspects of utility service are “national,” requiring uniformity; and which are “local,” warranting state experimentation?).

This field has many jobs, as new issues emerge and as baby boomers retire. Lawyers play varied roles. They advise clients who are suppliers or customers of regulated services, represent parties before regulatory tribunals, advise those tribunals or their legislative overseers, and challenge or defend those tribunals on judicial review.

Note: The 3-credit Writing Requirement section of this course is restricted to J.D. students only. The 2-credit Paper section of this course is restricted to LL.M. students only.

LAW 1600 v00 Toxic Chemical Law and Advocacy

J.D. Practicum | 4 credit hours

In a fieldwork practicum course, students participate in a weekly seminar and conduct related fieldwork at an outside organization focused on toxic chemical law. For example, have you ever wondered what is in the food and drink we consume besides the raw agricultural products such as coffee beans or milk? In this course, students will explore the how the Food and Drug Administration (FDA) under the Food, Drug, and Cosmetic Act, by the Environmental Protection Agency (EPA) under the Toxic Substances Control Act and other statutes, and the the Consumer Product Safety Commission (CPSC) under the Consumer Product Safety Act work together (or don’t) to regulate toxic chemical products in consumer products that are consumed or used in the U.S. every day such as coffee, soft drinks and yogurt. Students will develop real-world lawyering skills such as fact gathering, legal research, drafting, developing guidance or advice, crafting advocacy strategy and more. Students will participate in a two hour/week seminar and also undertake 10 hours/week of fieldwork at the Environmental Working Group (EWG), a public-interest nonprofit that advocates on behalf of consumers, and other non-governmental organizations.

SEMINAR: The authority of the FDA, EPA and CPSC to regulate the safety of toxic chemicals in consumer products has evolved as the manufacturing of everyday products has become increasingly industrialized and affected by an array of new technologies that cause the food and drink we regularly consume to contain potentially harmful chemicals. This seminar will utilize legislative and administrative materials as well as case law to enable students to critically evaluate the processes by which the federal government regulates toxic chemicals in consumer products and compare and contrast regulatory schemes for different consumer products. The course will also touch on related topics such as the role of the Federal Trade Commission in the regulation of marketing trade practices related to chemicals in consumer products.

FIELDWORK: In the fieldwork component of this course, students will be assigned to projects at the Environmental Working Group or a similar non-governmental organization. They will have an opportunity to learn how such institutions play a role in representing consumer interests in product safety issues being debated in both the administrative and legislative processes, and in matters subject to litigation.

Prerequisite: J.D. students must complete the required first-year program prior to enrolling in this course (part-time and interdivisional transfer students may enroll prior to completing Criminal Justice, Property, or their first-year elective).

Recommended: Administrative law, as well as food and drug law, and environmental law-related courses, are recommended but not required.

Mutually Excluded Courses: Students may not concurrently enroll in this practicum and an externship, a clinic, or another practicum.

Note: This practicum course is open to LL.M. students, space permitting. Interested LL.M. students should email the Office of the Registrar (lawreg@georgetown.edu) to request admission.

This course is suitable for evening students who can commit to attending class and working 10 hours/week (during business hours) on site at their field placements. This is a four credit course. Two credits will be awarded for the two-hour weekly seminar and two credits for approximately 10 hours of fieldwork per week, for a minimum of 11 weeks, to be scheduled with the faculty. The fieldwork must be completed during normal business hours. The two credit seminar portion of this practicum will be graded. The two credits of fieldwork are mandatory pass/fail. Students will be allowed to take another course pass/fail in the same semester as the field work. Students who enroll in this course will be automatically withdrawn from both the seminar and fieldwork components. Default withdraw requests only when the faculty member and the Assistant Dean for Experiential Education.

Mutually Excluded Courses: Students may not concurrently enroll in this practicum and an externship, a clinic, or another practicum.
LAW 1883 v00 Water Law in an Era of Climate Change (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1883 v00)

J.D. Seminar (cross-listed) | 1 credit hour
This course will introduce the legal principles governing the acquisition, use, and conservation of water resources, with an emphasis on the historic development of water allocation systems and the challenges posed by climate change. The course will first explore how states have developed competing allocation schemes—in riparianism, prior appropriation, and hybrid systems—in response to local conditions and inquire how those systems can respond to changing climatic conditions. The course will then examine the federal government’s role in water allocation through its various and competing interests, including, navigation, flood control, reclamation, conservation, and protection of Native American water rights. The course will also survey mechanisms for resolving water disputes between states, through interstate compacts and Supreme Court original actions, and among nations, through treaties and arbitration. The course materials will include case law, legislation, and academic commentary. Throughout the course, traditional water law principles will be examined in the context of current concerns over climate change.

Prerequisite: Property Law

Note: WEEK ONE COURSE. This seminar will meet for one week only, on the following days: Monday, January 8, 2024, through Thursday, January 11, 2024, 6:00 p.m. - 9:20 p.m. This course is mandatory pass/fail and will not count toward the 7 credit pass/fail limit for J.D. students.

ATTENDANCE IS MANDATORY AT ALL CLASS SESSIONS. Enrolled students must be in attendance at the start of the first class session in order to remain enrolled. Waitlisted students must be in attendance at the start of the first class session in order to remain eligible to be admitted off the waitlist. All enrolled students must attend each class session in its entirety. Failure to attend the first class session in its entirety will result in a drop; failure to attend any subsequent class session in its entirety may result in a withdrawal. Enrolled students will have until the beginning of the second class session to request a drop by contacting the Office of the Registrar; a student who no longer wishes to remain enrolled after the second class session begins will not be permitted to drop the class but may request a withdrawal from an academic advisor in the Office of Academic Affairs. Withdrawals are permitted up until the last class for this specific course.

LAW 1515 v01 Water Law Seminar (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1515 v01)

J.D. Seminar (cross-listed) | 2 credit hours
This course provides a survey of the key elements of domestic water resources law and policy, as well as selected international topics. Students will study the relevant state and federal law, legal opinions and interpretations, and development of underlying policies relating to water resources. The course will provide an overview of the basic doctrines relating to water law—prior appropriation and riparianism—and will consider hybrid systems of water allocation developed to address today’s needs and challenges. Students will examine the legal issues surrounding water as a shared regional resource in both domestic and international contexts. The course will review the law of federal and Indian reserved water rights. Finally, the course will address some of the pressuring water resources topics of today, such as sustainable management and climate change adaptation in watersheds and river basins in the U.S. and around the globe. We will also address strategies and challenges for addressing future international and domestic water needs. Throughout the course, we will consider the successes and failures of water resources law and policy and prospects for effective water resources management, including conservation, infrastructure development, and the importance of sound science. Students will be expected to participate in class discussions, as well as to complete a final paper. This is a two-credit seminar.

Mutually Excluded Courses: Students may not receive credit for both this seminar and Water Law Seminar: Allocation and Use in Times of Scarcity.

LAW 1827 v00 Wildlife and Ecosystems Law (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 1827 v00)

J.D. Course (cross-listed) | 2 credit hours
This course will involve an in-depth study of the complex body of laws by which we protect or regulate wildlife, including laws that protect ecosystems and the habitats in which wild animals live. The course will provide an overview of the wildlife common law history that stretches across several centuries and will address wildlife-specific federal laws and their accompanying regulations, including the Endangered Species Act, Migratory Bird Treaty Act, Marine Mammal Protection Act, and Magnuson-Stevens Fishery Conservation and Management Act. The course will also cover civil and criminal enforcement, constitutional and Tribal issues that arise in wildlife cases, as well as international law, including the Convention on International Trade in Endangered Species.

LAW 872 v00 World Trade Organization: Agreements, Negotiations & Disputes (http://curriculum.law.georgetown.edu/course-search/?keyword=LAW 872 v00)

LL.M Course (cross-listed) | 2 credit hours
The course analyzes the World Trade Organization (WTO) and its agreements, including the General Agreement on Tariffs and Trade (GATT), and the substance and status of negotiations to amend the agreements. It concentrates on the coverage of the agreements, based on their text and interpretive guidance from key dispute settlement decisions. The course also reviews the relevant economic, policy and legal aspects of the international trading system.
